### **PREPARATION**

PREPARATION PFP:00002

### **Special Service Tools**

ALS0006B

<u> </u>	tools may differ from those of special service tools	illustrated here.
Tool number (Kent-Moore No.) Tool name		Description
KV10115801 (J38956) Oil filter wrench	a	Removing and installing oil filter a: 64.3 mm (2.531 in)
	S-NT375	

### **Commercial Service Tools**

ALS0006C

Tool name (Kent-Moore No.)		Description
Power tool	PBIC0190E	Loosening bolts and nuts
Spark plug wrench	16 mm (0.63 in)	Removing and installing spark plug
Belt tension gauge (BT3373-F)	AMA126	Checking drive belt tension

### **GENERAL MAINTENANCE**

### **GENERAL MAINTENANCE**

PFP:00000

### **Explanation of General Maintenance**

ALS0006D

Α

В

D

F

G

Н

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform checks and inspections themselves or have their INFINITI dealers do them.

### **OUTSIDE THE VEHICLE**

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Item		Reference page					
Tires	Check the pressure with a gauge, including the spare, at least once a month and always prior to a long distance trips. Adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear.						
Wheel nuts	When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.						
Windshield	Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary.	_					
Tire rotation	For coupe models, tires cannot be rotated, as front tires are different size from rear tires and the direction of wheel rotation is fixed in each tire.	_					
Wheel alignment and balance	If the vehicle pulls to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.	MA-22, FSU-6					
Windshield wiper blades	Check for cracks or wear if they do not wipe properly.	_					
Doors and engine hood	Check that all doors and the engine hood operate smoothly as well as the trunk lid and back hatch. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released.  When driving in areas using road salt or other corrosive materials, check lubrication frequently.	<u>MA-26</u>					
Lamps	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check headlamp aim. Clean the headlamps on a regular basis.	_					

### **INSIDE THE VEHICLE**

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page
Warning lamps and chimes	Make sure that all warning lamps and chimes are operating properly.	_
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	_
Windshield defroster	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioner.	
Steering wheel	Check that it has the specified play. Be sure to check for changes in the steering condition, such as excessive play, hard steering or strange noises.  Free play: Less than 35 mm (1.38 in)	_
Seats	Check seat position controls such as seat adjusters, seatback recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restrains move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seatbacks.	_
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	MA-27
Accelerator pedal	Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mats away from the pedal.	

MA

Κ

### **GENERAL MAINTENANCE**

Item		Reference page
Brakes	Check that the brake does not pull the vehicle to one side when applied.	_
Brake pedal and booster	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep the floor mats away from the pedal.	BR-6, BR-19
Parking brake	Check that the pedal or lever has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	PB-3, PB-4
Automatic transmis- sion "Park" mecha- nism	Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the selector lever in the "P" position without applying any brakes.	_

### **UNDER THE HOOD AND VEHICLE**

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).

Item		Reference page					
Windshield washer fluid	Check that there is adequate fluid in the tank.	_					
Engine coolant level	Check the coolant level when the engine is cold.	<u>MA-12</u>					
Radiator and hoses	diator and hoses  Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, deterioration or loose connections.						
Brake fluid level	Make sure that the brake fluid level is between the "MAX" and "MIN" lines on the reservoir.	MA-23					
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	_					
Engine drive belts	Make sure that no belt is frayed, worn, cracked or oily.	<u>MA-11</u>					
Engine oil level	Check the level on oil level gauge after parking the vehicle on a level spot and turning off the engine.	<u>MA-15</u>					
Power steering fluid level and lines	Check the level on the dipstick with the engine off. Check the lines for improper attachment, leaks, cracks, etc.	<u>MA-25</u>					
Exhaust system	Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	<u>MA-18</u>					
Underbody	The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.	_					
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.						

### PERIODIC MAINTENANCE

PFP:00026

**Emission Control Sys-**

tem Maintenance

Maintenance

### **Introduction of Periodic Maintenance**

remaining below freezing.

one or more of the following driving conditions:

• Repeated short trips of less than 5 miles (8 km).

LS0006E

Α

В

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage/time intervals.

Follow Periodic Maintenance Schedule 1 if the driving habits frequently include

• Repeated short trips of less than 10 miles (16 km) with outside temperatures

<u>MA-6</u>	
<u>MA-7</u>	Е
	F

• Operating in hot weather in stop-and-go "rush hour" traffic. Schedule 1 • Extensive idling and/or low speed driving for long distances, such as police, Chassis and Body taxi or door-to-door delivery use. Maintenance • Driving in dusty conditions. • Driving on rough, muddy, or salt spread roads. • Towing a trailer, using a camper or a car-top carrier. Follow Periodic Maintenance Schedule 2 if none of driving conditions shown in **Emission Control Sys-**<u>MA-7</u> Schedule 1 apply to the driving habits. tem Maintenance Schedule 2 Chassis and Body MA-8

Engine oil		R	R	R	R	R	R	R	R	<u>MA-15</u>
Engine oil filter (Use part No. 15208 31U00 or 15208 65F00 or equivalent.)		R	R	R	R	R	R	R	R	MA-15
Spark plugs (PLATINUM- TIPPED type)		Replace every 105,000 miles (169,000 km).						<u>MA-16</u>		
Intake & exhaust valve clear- ance*	NOTE (5)									EM-82. "Valve Clear- ance"

#### NOTE:

- (1) After 60,000 miles (96,000 km) or 48 months, inspect every 15,000 miles (24,000 km) or 12 months. Replace the drive belts if found damaged.
- (2) If operating mainly in dusty conditions, more frequent maintenance may be required.
- (3) Maintenance-free item. For service procedures, refer to FL section.
- (4) After 60,000 miles (96,000 km) or 48 months, replace every 30,000 miles (48,000 km) or 24 months.
- (5) If valve noise increases, inspect valve clearance.
- \* Maintenance items and intervals with "\*" are recommended by INFINITI for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

### **CHASSIS AND BODY MAINTENANCE**

Abbreviations: R = Replace. I = Inspect. Correct or replace if necessary.

MAINTENANCE OPERATION	1	MAINTENANCE INTERVAL							Reference	
Perform at number of miles, kilometers or months, whichever comes first.	Miles x 1,000 (km x 1,000) Months	3.75 (6) 3	7.50 (12) 6	11.25 (18) 9	15 (24) 12	18.75 (30) 15	22.5 (36) 18	26.25 (42) 21	30 (48) 24	Section - Page or - Content Title

<sup>\*1:</sup> For further details, see "SAE Viscosity Number".

MA

Κ

<sup>\*2:</sup> Using automatic transmission fluid other than Genuine Nissan Matic J ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the INFINITI new vehicle limited warranty.

<sup>\*3:</sup> For Canada, NISSAN Automatic Transmission Fluid (ATF), DEXRON<sup>TM</sup> III/ MERCON<sup>TM</sup>, or equivalent ATF may also be used.

<sup>\*4:</sup> Available in mainland U.S.A. through your INFINITI dealer.

 $<sup>^{\</sup>star}5$ : For hot climates, viscosity SAE 90 is suitable for ambient temperatures above 0°C (32°F).

### RECOMMENDED FLUIDS AND LUBRICANTS

## SAE Viscosity Number GASOLINE ENGINE OIL

ALS00061

SAE 5W-30 viscosity oil is preferred for all temperatures. SAE 10W-30 and 10W-40 viscosity oil may be used if the ambient temperature is above  $-18^{\circ}C(0^{\circ}F)$ 

### **Anti-Freeze Coolant Mixture Ratio**

ALS000A1

The engine cooling system is filled at the factory with a high-quality, year-round, anti-freeze coolant solution. The anti-freeze solution contains rust and corrosion inhibitors. Therefore, additional cooling system additives are not necessary.

### **CAUTION:**

When adding or replacing coolant, be sure to use only Genuine Nissan Long Life Antifreeze /Coolant or equivalent with the proper mixture ratio of 50% anti-freeze and 50% demineralized water/distilled water.

Other types of coolant solutions may damage your cooling system.

	side re down to	Anti-freeze

### **ENGINE MAINTENANCE**

#### PFP:00000

### **Checking Drive Belts**

ALS000Q6

Α

В

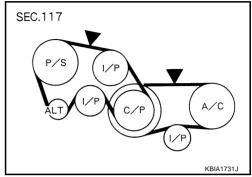

F

Н

### **WARNING:**

Be sure to perform when the engine is stopped.

- Inspect belts for cracks, fraying, wear and oil. If necessary, replace.
- Inspect drive belt deflection or tension at a point on the belt midway between pulleys.
  - Inspection should be done only when engine is cold, or over 30 minutes after engine is stopped.
  - Measure the belt tension with belt tension gauge (commercial) service tool: BT3373-F or equivalent) at points marked ▼ shown in the figure.
  - When measuring deflection, apply 98 N (10 kg, 22 lb) at the ▼ marked point.
  - Adjust if belt deflection exceeds the limit or if belt tension is not within specifications.

#### **CAUTION:**

- When checking belt deflection or tension immediately after installation, first adjust it to the specified value. Then, after turning the crankshaft two turns or more, re-adjust to the specified value to avoid variation in deflection between pulleys.
- Tighten idler pulley lock nut by hand and measure the deflection or tension without looseness.

#### Belt deflection and tension

	Deflection adjustment		Unit: mm (in)	Tension a	Tension adjustment*1		
	Us	ed belt	New belt	Used belt		New belt	
	Limit	After adjustment	new beit	Limit	After adjustment	new beit	
Alternator and power steering oil pump belt	7 (0.28)	4 - 5 (0.16 - 0.20)	3.5 - 4.5 (0.138 - 0.177)	294 (30, 66)	730 - 818 (74.5 - 83.5, 164 - 184)	838 - 926 (85.5 - 94.5, 188 - 208)	
A/C compressor belt	12 (0.47)	9 - 10 (0.35 - 0.39)	8 - 9 (0.31 - 0.35)	196 (20, 44)	348 - 436 (35.5 - 44.5, 78 - 98)	470 - 559 (48 - 57, 106 - 126)	
Applied pushing force		98 N (10 kg, 22 lb)			_		

<sup>\*1 :</sup> If belt tension gauge cannot be installed at check points shown, check drive belt tension at different location on the belt.

### **Tension Adjustment**

ALS000Q7

Portion	Belt tightening method for adjustment
Alternator and power steering oil pump belt	Adjusting bolt on idler pulley
A/C compressor belt	Adjusting bolt on idler pulley

#### **CAUTION:**

- When belt is replaced with a new one, adjust it to value for "New belt" to accommodate for insufficient adaptability with pulley grooves.
- When deflection or tension of belt being used exceeds "Limit", adjust it to value for "After adjustment".
- When checking belt deflection or tension immediately after installation, first adjust it to the specified value. Then, after turning crankshaft two turns or more, re-adjust to the specified value to avoid variation in deflection between pulleys.
- When installing belt, make sure that it is correctly engaged with pulley groove.
- Keep oil and water away from belt.
- Do not twist or bend belt excessively.

MA

M

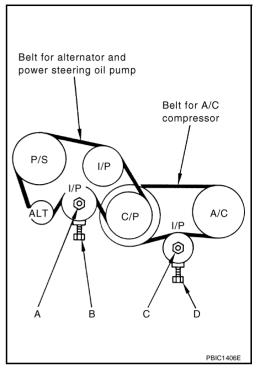

K

MA-11

### ALTERNATOR AND POWER STEERING OIL PUMP BELT

- 1. Remove undercover with power tool.
- 2. Loosen idler pulley lock nut (A) and adjust tension by turning adjusting bolt (B).
  - For specified belt tension, refer to MA-11, "Checking Drive Belts".
- 3. Tighten nut (A).

(2): 34.8 N·m (3.5 kg-m, 26 ft-lb)

### A/C COMPRESSOR BELT

- 1. Remove undercover with power tool.
- 2. Loosen idler pulley lock nut (C) and adjust tension by turning adjusting bolt (D).
  - For specified belt tension, refer to MA-11, "Checking Drive Belts".
- 3. Tighten nut (C).

(2): 34.8 N·m (3.5 kg-m, 26 ft-lb)

### **Changing Engine Coolant**

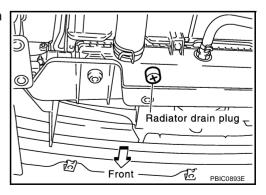

ALS000Q8

#### **WARNING:**

- To avoid being scalded, do not change engine coolant when engine is hot.
- Wrap a thick cloth around radiator cap and carefully remove radiator cap. First, turn cap a quarter
  of a turn to release built-up pressure. Then turn radiator cap all the way.
- Be careful not to allow engine coolant to contact drive belts.

### **DRAINING ENGINE COOLANT**

- 1. Remove undercover with power tool.
- 2. Open radiator drain plug at the bottom of radiator, and then remove radiator cap.

When drain all of engine coolant in the system, open drain plugs on engine cylinder block. Refer to  $\underline{\text{EM-109, "DISASSEMBLY"}}$ .

3. Remove reservoir tank, drain engine coolant and clean tank before installing.

Check drained engine coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush the engine cooling system. Refer to MA-14, "FLUSHING COOLING SYSTEM".

### **REFILLING ENGINE COOLANT**

1. Install reservoir tank, and radiator drain plug.

#### **CAUTION:**

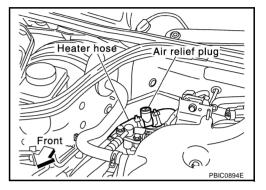

Be sure to clean drain plug and install with new O-ring.

Radiator drain plug:

(0.12 kg-m, 11 in-lb)

If cylinder block drain plugs are removed, close and tighten them. Refer to EM-114, "ASSEMBLY".

2. Remove air relief plug on heater hose.

- 3. Fill radiator and reservoir tank to specified level.
  - Pour engine coolant through engine coolant filler neck slowly of less than  $2\ell$  (2-1/8 US qt, 1-3/4 lmp qt) a minute to allow air in system to escape.
  - Use Genuine Nissan Long Life Antifreeze/ Coolant or equivalent mixed with water (distilled or demineralized). Refer to MA-9, "RECOMMENDED FLUIDS AND LUBRI-CANTS".

**Engine coolant capacity (Approximate)** (with reservoir tank at "MAX" level)

: 8.7  $\ell$  (9-1/4 US qt, 7-5/8 Imp qt)

Radiator 

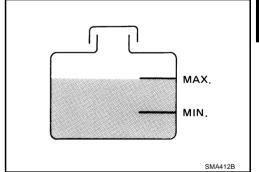

Reservoir tank capacity (at "MAX" level)

: 0.8 \( \ell \) (7/8 US qt, 3/4 Imp qt)

 When engine coolant overflows air relief hole on heater hose. install air relief plug with new O-ring.

Air relief plug:

(0.12 kg-m, 11 in-lb)

- 4. Warm up engine to normal operating temperature with radiator cap installed.
- 5. Run engine at 3,000 rpm for 10 seconds and return to idle speed.
  - Repeat two or three times.

#### **CAUTION:**

Watch water temperature gauge so as not to overheat engine.

- 6. Stop engine and cool down to less than approximately 50°C (122°F).
  - Cool down using a fan to reduce the time.
  - If necessary, refill radiator up to filler neck with engine coolant.
- 7. Refill reservoir tank to "MAX" level line with engine coolant.

MA

K

Н

Α

В

- 8. Repeat steps 3 through 6 two or more times with radiator cap installed until engine coolant level no longer drops.
- 9. Check cooling system for leaks with engine running.
- 10. Warm up engine, and check for sound of engine coolant flow while running engine from idle up to 3,000 rpm with heater temperature controller set at several position between "COOL" and "WARM".
  - Sound may be noticeable at heater unit.
- 11. Repeat step 10 three times.
- 12. If sound is heard, bleed air from cooling system by repeating step 3 through 6 until engine coolant level no longer drops.
  - Clean excess engine coolant from engine.

### FLUSHING COOLING SYSTEM

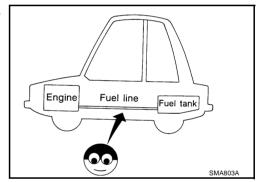

- 1. Fill radiator with water until water spills from the air relief hole, then close air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.
- 2. Run engine and warm it up to normal operating temperature.
- 3. Rev engine two or three times under no-load.
- 4. Stop engine and wait until it cools down.
- Drain water from the system. Refer to MA-12, "DRAINING ENGINE COOLANT".
- 6. Repeat steps 1 through 5 until clear water begins to drain from radiator.

### Checking Fuel Lines

ALS000Q9

Inspect fuel lines, filler cap and tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.

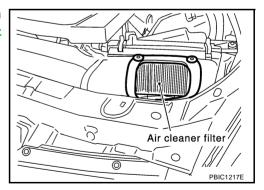

If necessary, repair or replace damaged parts.

## Changing Air Cleaner Filter VISCOUS PAPER TYPE

ALS000QA

The viscous paper type filter does not need cleaning between replacement intervals. Refer to <u>MA-5, "PERIODIC MAINTENANCE"</u>.

### **Changing Engine Oil**

ALS000QB

Α

В

F

Н

### **WARNING:**

- Be careful not to burn yourself, as the engine oil may be hot.
- Prolonged and repeated contact with used engine oil may cause skin cancer; try to avoid direct skin contact with used engine oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
- 1. Warm up engine, put vehicle horizontally and check for oil leakage from engine components. Refer to LU-6, "OIL LEAKAGE" .
- 2. Stop engine and wait for 10 minutes.
- Loosen oil filler cap and then remove drain plug.
- Drain engine oil.
- 5. Install drain plug with new washer. Refer to EM-28, "OIL PAN AND OIL STRAINER".

Be sure to clean drain plug and install with new washer.

### Oil pan drain plug:

(2): 34.3 N·m (3.5 kg-m, 25 ft-lb)

Refill with new engine oil.

**Engine oil specification and viscosity:** 

Refer to MA-9, "RECOMMENDED FLUIDS AND LUBRICANTS".

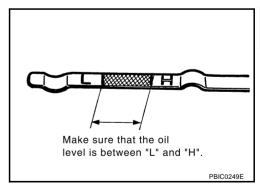

### **Engine oil capacity (Approximate):**

Unit: ℓ (US qt, Imp qt)

Drain and refill	With oil filter change	4.7 (5, 4-1/8)
	Without oil filter change 4.4 (4-5/8, 3-7/8)	
Dry engine (Overhaul)		5.4 (5-3/4, 4-3/4)

#### CAUTION:

- When filling engine oil, do not pull out oil level gauge.
- The refill capacity depends on the engine oil temperature and drain time. Use these specifications for reference only.
- 7. Warm up engine and check area around drain plug and oil filter for oil leakage.
- Stop engine and wait for 10 minutes.
- Check the engine oil level.

### Changing Oil Filter REMOVAL

1. Remove undercover with power tool.

MA

M

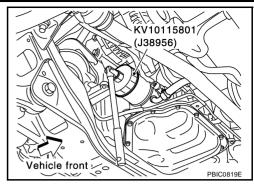

K

ALS000QC

2. Using oil filter wrench (SST), remove oil filter.

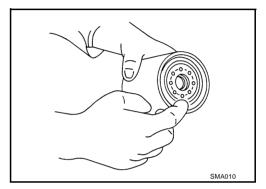

#### **CAUTION:**

- Oil filter is provided with relief valve. Use Genuine NIS-SAN Oil Filter or equivalent.
- Be careful not to get burned when engine and engine oil may be hot.
- When removing, prepare a shop cloth to absorb any engine oil leakage or spillage.
- Do not allow engine oil to adhere to drive belts.
- Completely wipe off any engine oil that adheres to the engine and the vehicle.

### **INSTALLATION**

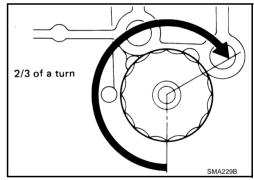

- 1. Remove foreign materials adhering to oil filter installation surface.
- 2. Apply engine oil to the oil seal contact surface of new oil filter.

3. Screw oil filter manually until it touches the installation surface, then tighten it by 2/3 turn. Or tighten to specification.

#### Oil filter:

(1.8 kg-m, 13 ft-lb)

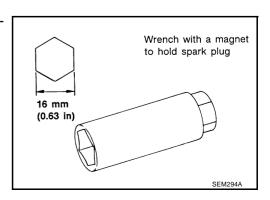

#### INSPECTION AFTER INSTALLATION

- 1. Start engine, and make sure that there is no leak of engine oil.
- 2. Stop engine and wait for 10 minutes.
- 3. Check the engine oil level and add engine oil. Refer to MA-15, "Changing Engine Oil".

## **Changing Spark Plugs (Platinum-Tipped Type) REMOVAL**

ALS000QD

- 1. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
- 2. Remove ignition coil. Refer to EM-34, "IGNITION COIL".
- 3. Remove spark plug using spark plug wrench (commercial service tool).

### INSPECTION AFTER REMOVAL

Use standard type spark plug for normal condition.

Hot type spark plug is suitable when fouling occurs with standard type spark plug under conditions such as:

- Frequent engine starts
- Low ambient temperatures

Cold type spark plug is suitable when spark plug knock occurs with standard type spark plug under conditions such as:

- Extended highway driving
- Frequent high engine revolution

Make	NGK
Standard type	PLFR5A-11
Hot type	PLFR4A-11
Cold type	PLFR6A-11

**Gap (Nominal)** : 1.1 mm (0.043 in)

#### **CAUTION:**

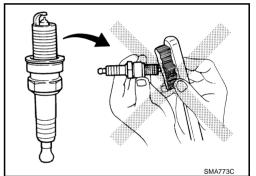

- Do not drop or shock spark plug.
- Do not use wire brush for cleaning.
- If plug tip is covered with carbon, spark plug cleaner may be used.

Cleaner air pressure:

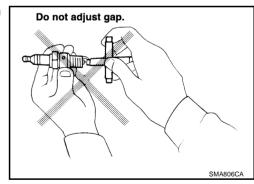

Less than 588 kPa (6 kg/cm<sup>2</sup>, 85 psi)

Cleaning time:

Less than 20 seconds

Checking and adjusting plug gap is not required between change intervals.

### INSTALLATION

Install in the reverse order of removal.

Spark plug:

(C): 19.6 - 29.4 N·m (2.0 - 2.9 kg-m, 15 - 21 ft-lb)

### **Checking EVAP Vapor Lines**

ALS000QF

- Visually inspect EVAP vapor lines for improper attachment and for cracks, damage, loose connections, chafing and deterioration.
- 2. Inspect fuel tank filler cap vacuum relief valve for clogging, sticking, etc. Refer to EC-637, "EVAPORATIVE EMISSION SYSTEM" .

K

Α

В

F

F

Н

MA

### **CHASSIS AND BODY MAINTENANCE**

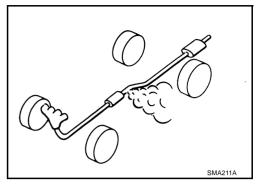

### PFP:00100

### **Checking Exhaust System**

ALS0006S

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage, chafing or deterioration.

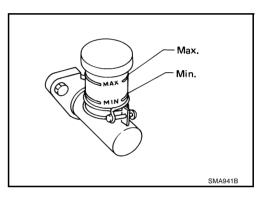

• If anything is found, repair or replace damaged parts.

#### ALS0009Y

### **Checking Clutch Fluid Level and Leaks**

If fluid level is extremely low, check clutch system for leaks.

### **Checking M/T Oil Leakage**

ALS0009Z

• Check if oil is leaking from transmission or around it.

Changing M/T Oil

1. Drain oil from drain plug and refill with new gear oil.

2. Check oil level from filler hole as shown in the figure.

Oil grade and viscosity: Refer to MA-9, "RECOMMENDED FLUIDS AND LUBRICANTS".

Oil capacity: Approx.  $2.9 \ell$  (3-1/8 US qt, 2-1/2 lmp

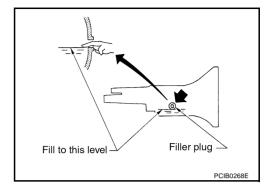

qt)

Filler plug and drain plug:

25 ft-lb)

**CAUTION:** 

Do not reuse gaskets.

**Checking A/T Fluid** 

Warm up engine.

Check for fluid leakage.

3. Remove the tightening bolt for A/T fluid level gauge.

 Before driving, fluid level can be checked at fluid temperatures of 30 to 50°C (86 to 122°F) using "COLD" range on A/T fluid level gauge as follows.

a. Park vehicle on level surface and set parking brake.

b. Start engine and move selector lever through each gear position. Leave selector lever in "P" position.

c. Check fluid level with engine idling.

d. Remove A/T fluid level gauge and wipe clean with lint-free paper.

### **CAUTION:**

When wiping away the fluid level gauge, always use lintfree paper, not a cloth one.

e. Re-insert A/T fluid level gauge into charging pipe as far as it will go.

### **CAUTION:**

To check fluid level, insert the A/T fluid level gauge until the cap contacts the end of the charging pipe, with the gauge reversed from the normal attachment conditions.

f. Remove A/T fluid level gauge and note reading. If reading is at low side of range, add fluid to the charging pipe.

#### **CAUTION:**

Do not overfill.

5. Drive vehicle for approximately 5 minutes in urban areas.

6. Make the fluid temperature approximately 65°C (149°F).

• Front side

HOT [65°C (149 F)]

Add

OK

Add

OK

SCIA4835E

Н

Α

F

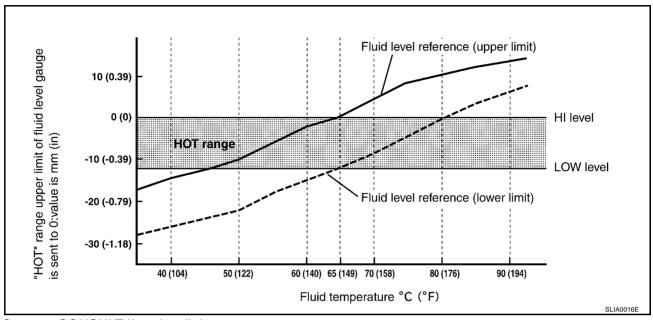

ALS0006T

MA

K

### NOTE:

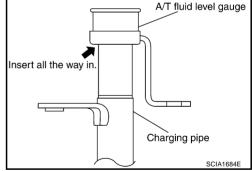

Fluid level will be greatly affected by temperature as shown in figure. Therefore, be certain to perform operation while checking data with CONSULT-II.

- Connect CONSULT-II to data link connector.
- b. Select "MAIN SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
- c. Read out the value of "ATF TEMP 1".
- 7. Re-check fluid level at fluid temperatures of approximately 65°C (149°F) using "HOT" range on A/T fluid level gauge.

### **CAUTION:**

- When wiping away the fluid level gauge, always use lint-free paper, not a cloth one.
- To check fluid level, insert the A/T fluid level gauge until the cap contacts the end of the charging pipe, with the gauge reversed from the normal attachment conditions as shown.
- 8. Check fluid condition.
  - If fluid is very dark or smells burned, check operation of A/T.
     Flush cooling system after repair of A/T.
  - If A/T fluid contains frictional material (clutches, bands, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of A/T. Refer to CO-13, "RADIATOR" and AT-14, "A/T Fluid Cooler Cleaning".

9. Install the removed A/T fluid level gauge in the fluid charging pipe.

#### Level gauge bolt:

: 5.1 N·m (0.52 kg-m, 45 in-lb)

### Changing A/T Fluid

ALS0006U

- 1. Warm up A/T fluid.
- 2. Stop engine.
- Remove the tightening bolt for A/T fluid level gauge.
- 4. Drain A/T fluid from drain plug and refill with new A/T fluid. Always refill same volume with drained fluid.
  - To replace the A/T fluid, pour in new fluid at the charging pipe with the engine idling and at the same time drain the old fluid from the radiator cooler hose return side.
  - When the color of the fluid coming out is about the same as the color of the new fluid, the replacement is complete. The amount of new transmission fluid to use should be 30 to 50% increase of the stipulated amount.

A/T fluid: Genuine Nissan Matic J ATF Fluid capacity: 10.3  $\ell$  (10-7/8 US pt. 9-1/8 lmp pt)

#### **CAUTION:**

- Use only Genuine Nissan Matic J ATF. Do not mix with other fluid.
- Using automatic transmission fluid other than Genuine Nissan Matic J ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the warranty.
- When filling A/T fluid, take care not to scatter heat generating parts such as exhaust.

**Drain plug:** 

(3.5 kg-m, 25 ft-lb)

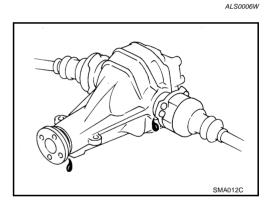

- 5. Run engine at idle speed for 5 minutes.
- 6. Check fluid level and condition. Refer to MA-19, "Checking A/T Fluid" . If fluid is still dirty, repeat step 2. through 5.
- 7. Install the removed A/T fluid level gauge in the fluid charging pipe.

Level gauge bolt:

• : 5.1 N·m (0.52 kg-m, 45 in-lb)

### **Checking Differential Gear Oil**

Check for oil leakage.

### **Changing Differential Gear Oil**

- 1. Drain oil from drain plug and refill with new gear oil.
- 2. Check oil level.

Oil grad and Viscosity:

Refer to MA-9, "RECOMMENDED FLUIDS AND LUBRICANTS".

Capacity:

R200, R200V

1.4 ℓ (3 US pt, 2 - 1/2 Imp pt)

Filler plug:

2: 34.5 N·m (3.5 kg-m, 25 ft-lb)

**Drain plug:** 

2: 34.5 N·m (3.5 kg-m, 25 ft-lb)

#### **CAUTION:**

Gaskets are not reusable. Never reuse them.

**MA-21** 

## **Balancing Wheels (Bonding Weight Type) REMOVAL**

ALS0006Y

1. Remove inner and outer balance weights from the road wheel.

#### CAUTION:

Be careful not to scratch the road wheel during removal.

2. Using releasing agent, remove double-faced adhesive tape from the road wheel.

#### CAUTION:

- Be careful not to scratch the road wheel during removal.
- After removing double-faced adhesive tape, wipe clean traces of releasing agent from the road wheel.

#### WHEEL BALANCE ADJUSTMENT

- If a tire balance machine has adhesion balance weight mode settings and drive-in weight mode setting, select and adjust a drive-in weight mode suitable for road wheels.
- 1. Set road wheel on wheel balancer using the center hole as a guide. Start the tire balance machine.
- 2. When inner and outer unbalance values are shown on the wheel balancer indicator, multiply outer unbalance value by 5/3 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and install it to the designated outer position of, or at the designated angle in relation to the road wheel.

#### **CAUTION:**

- Do not install the inner balance weight before installing the outer balance weight.
- Before installing the balance weight, be sure to clean the mating surface of the road wheel.

Indicated unbalance value  $\times$  5/3 = balance weight to be installed Calculation example:

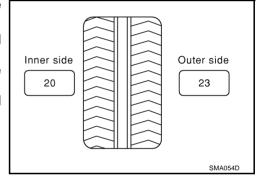

23 g  $(0.81 \text{ oz}) \times 5/3 = 38.33 \text{ g} (1.35 \text{ oz}) = 40 \text{ g} (1.41 \text{ oz})$  balance weight (closer to calculated balance weight value)

Note that balance weight value must be closer to the calculated balance weight value.

Example:

37.4 = 35 g (1.23 oz)

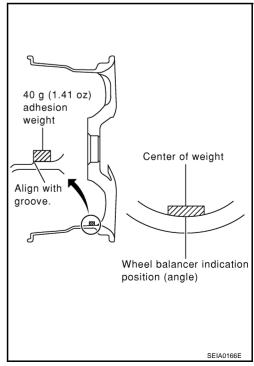

37.5 = 40 g (1.41 oz)

- a. Install balance weight in the position shown in the figure at right.
- b. When installing balance weight to road wheels, set it into the grooved area on the inner wall of the road wheel as shown in the figure so that the balance weight center is aligned with the wheel balancer indication position (angle).

#### **CAUTION:**

- Always use genuine Nissan adhesion balance weights.
- Balance weights are unreusable; always replace with new ones.
- Do not install more than three sheets of balance weight.

If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other (as shown in the figure).

#### **CAUTION:**

Do not install one balance weight sheet on top of another.

- 3. Start wheel balancer again.
- 4. Install drive-in balance weight on inner side of road wheel in the wheel balancer indication position (angle).

### Do not install more than two balance weights.

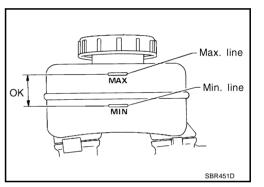

- 5. Start wheel balancer. Make sure that inner and outer residual unbalance values are 10 g (0.35 oz) each or below.
  - If either residual unbalance value exceeds 10 g (0.35 oz), repeat installation procedures.

### Wheel balance (Maximum allowable unbalance):

Maximum allowable	Dynamic (At rim flange)	Less than 10 g (0.35 oz) (one side)
unbalance	Static (At rim flange)	Less than 20 g (0.70 oz)

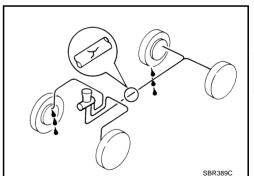

### **Checking Brake Fluid Level and Leaks**

If fluid level is extremely low, check brake system for leaks.

### **Checking Brake Lines and Cables**

Check brake fluid lines and parking brake cables for improper attachment, leaks, chafing, abrasions, deterioration, etc.

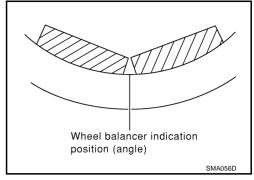

### **Changing Brake Fluid**

- 1. Drain brake fluid from each bleed valve.
- Refill until new brake fluid comes out from each bleed valve. Use same procedure as in bleeding hydraulic system to refill brake fluid.

Refer to BR-10, "Bleeding Brake System".

- Refill with recommended Genuine Brake Fluid or equivalent DOT 3 (US FMVSS No. 116).
  - Refer to MA-9, "RECOMMENDED FLUIDS AND LUBRI-CANTS".
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas.

# Checking Steering Gear and Linkage STEERING GEAR

ALS00074

- Check gear housing and boots for looseness, damage and grease leakage.
- Check connection with steering column for looseness.

### STEERING LINKAGE

Check ball joint, dust cover and other component parts for looseness, wear, damage and grease leakage.

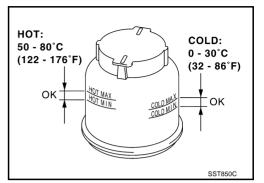

### **Checking Power Steering Fluid and Lines**

Check fluid level in reservoir tank with engine off.

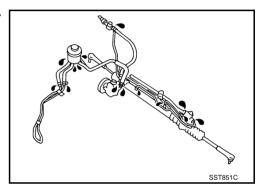

Use "HOT" range at fluid temperatures of 50 to 80°C (122 to 176°F) or "COLD" range at fluid temperatures of 0 to 30°C (32 to 86°F).

#### **CAUTION:**

- Do not overfill.
- Recommended fluid is Genuine NISSAN PSF or equivalent.
   Refer to MA-9, "RECOMMENDED FLUIDS AND LUBRICANTS"

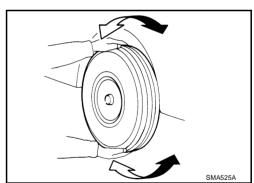

- Check lines for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.
- Check rack boots for accumulation of power steering fluid.

### **Axle and Suspension Parts**

Check front and rear axle and suspension parts for excessive play, cracks, wear or other damage.

- Shake each wheel to check for excessive play.
- Check wheel bearings for smooth operation.
- Check axle and suspension nuts and bolts for looseness.
- Check strut (shock absorber) for oil leakage or other damage.
- Check suspension ball joint for grease leakage and ball joint dust cover for cracks or other damage.

### Checking Seat Belt, Buckles, Retractors, Anchors and Adjusters

ALS00079

В

D

#### CAUTION:

 After any collision, inspect all seat belt assemblies, including retractors and other attached hardwares (I.e. anchor bolt, guide rail set). Nissan recommends to replace all seat belt assemblies in use during a collision, unless not damaged and properly operating after minor collision. Also inspect seat belt assemblies not in use during a collision, and replace if damaged or improperly operating. Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision where the driver and passenger air bags are deployed.

 If any component of seat belt assembly is questionable, do not repair.
 Replace as seat belt assembly.

 If webbing is cut, frayed, or damaged, replace belt assembly.

• Never oil tongue and buckle.

• Use a genuine NISSAN seat belt assembly.

For details, refer to "Seat Belt Inspection" in SB section.
