Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS00673

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

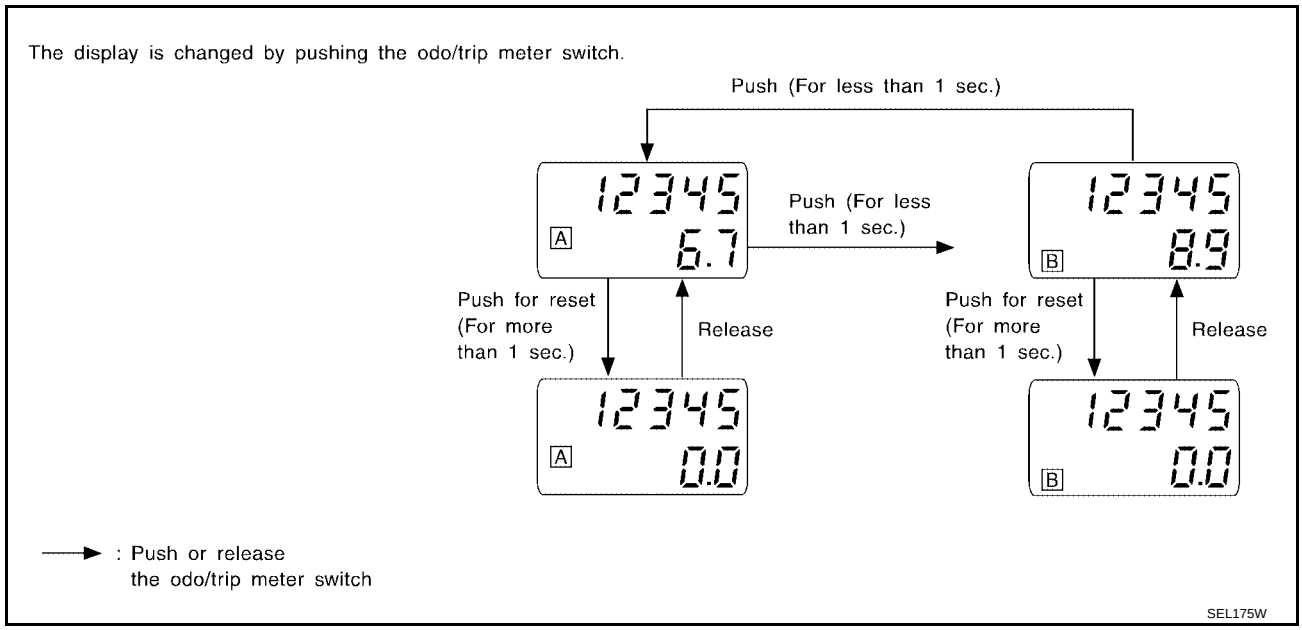
UNIFIED CONTROL METER

- Speedometer, odo/trip meter, tachometer, fuel gauge and water temperature gauge are controlled by the unified meter control unit, which is built into the combination meter.
- Digital meter is adopted for odo/trip meter.*
  *The record of the odometer is kept even if the battery cable is disconnected. The record of the trip meter is erased when the battery cable is disconnected.
- Odo/trip meter and A/T indicator segments can be checked in diagnosis mode.
- Meter/gauge can be checked in diagnosis mode.

HOW TO CHANGE THE DISPLAY FOR ODO/TRIP METER

- The vehicle speed signal and the memory signals from the meter memory circuit are processed by the combination meter and the mileage is displayed.

- Depressing the odometer/trip switch toggles the mode in the following order.



- The odo/trip meter display mode toggling and trip display resetting can be identified by the amount of time that elapses from pressing the odo/trip meter switch to releasing it.
- When resetting with trip A displayed, only trip A display is reset (Trip B operates the same way).

POWER SUPPLY AND GROUND CIRCUIT

Power is supplied at all times

- through 10A fuse [No. 19, located in the fuse block (J/B)]
- to combination meter terminal 5.

With the ignition switch in the ON or START position, power is supplied

- through 10A fuse [No. 14, located in the fuse block (J/B)]
- to combination meter terminals 17 and 18.

Ground is supplied

- to combination meter terminals 6 and 39
- through body grounds F14 (QR25DE models), M57 and M61.

WATER TEMPERATURE GAUGE

The water temperature gauge indicates the engine coolant temperature.
ECM provides an engine coolant temperature signal to combination meter for water temperature gauge with CAN communication line.

TACHOMETER

The tachometer indicates engine speed in revolutions per minute (rpm).
ECM provides an engine speed signal to combination meter for tachometer with CAN communication line.

FUEL GAUGE

The fuel gauge indicates the approximate fuel level in the fuel tank.
The fuel gauge is regulated by a variable ground signal supplied

- to combination meter terminal 12
- from terminal G of the fuel level sensor unit
- through terminal E of the fuel level sensor unit and
- through body grounds F14 (QR25DE models), M57 and M61.

EKS003F8

SELF–DIAGNOSIS FUNCTION

- Odo/trip meter (board computer) segment operation can be checked in self-diagnosis mode.
- Meters/gauges can be checked in self-diagnosis mode.

HOW TO ALTERNATE DIAGNOSIS MODE

1. Turn the ignition switch ON, and switch the odometer/trip meter to “trip A” or “trip B”.

   NOTE:
   If the diagnosis function is activated with the trip meter A displayed, the mileage on the trip meter A will indicate 000.0 miles, but the actual trip mileage will be retained. (Trip B operates the same way.)
2. Turn the ignition switch OFF.
3. While pushing the odo/trip meter switch, turn the ignition switch ON again.
4. Check that the trip meter displays "000.0".
5. Push the odo/trip meter switch at least 7 times within 7 seconds after the ignition switch is turned ON.

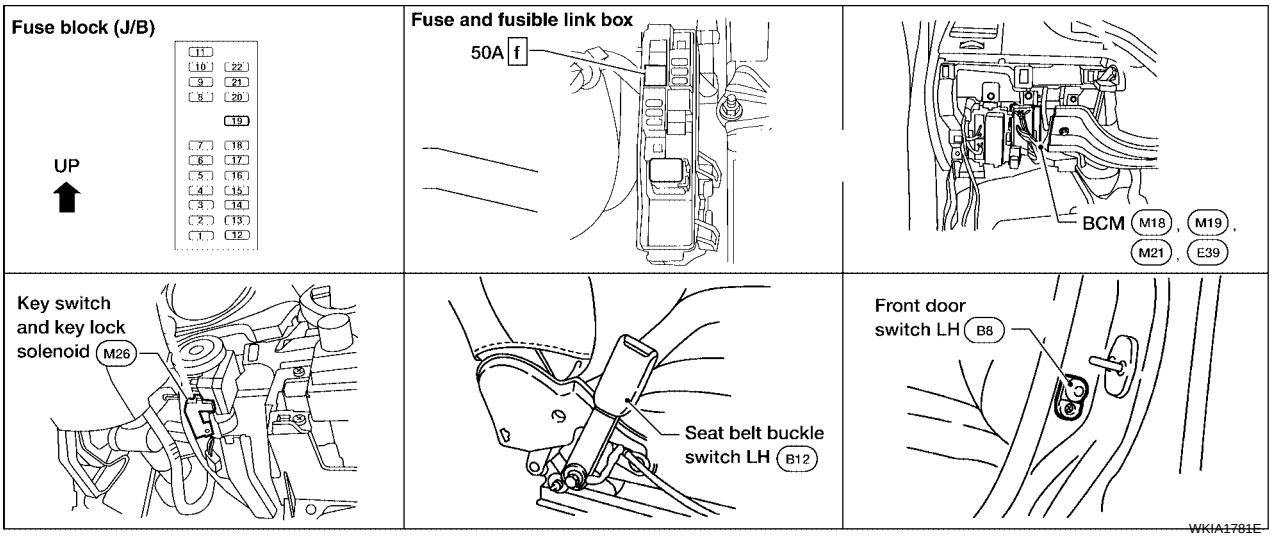
EKS003G5



System Description

EKS003G6

FUNCTION

Item	Description
Ignition key warning chime	Sounds warning chime when driver's door is opened with key in ignition key cylinder and ignition switch "OFF" or "ACC" position.
Light warning chime	Sounds warning chime when driver's door is opened with lighting switch in the 1st or 2nd position and the key removed from the ignition switch.
Seat belt warning chime	Sounds warning chime for approximately 6 seconds after ignition switch is turned "ON" when driver seat belt is unfastened.

NOTE:
When ignition key warning chime, light warning chime, and seat belt warning chime should be performed at the same time, the priorities for each chime are the following.

1. Seat belt warning chime
2. Ignition key warning chime
3. Light warning chime

Power is supplied at all times

- through 50A fuse (letter f, located in the fuse and fusible link box)
- to BCM terminal 7, and
- through 10A fuse [No. 19, located in the fuse block (J/B)]
- to key switch and key lock solenoid terminal 3.

Ground is supplied

- to BCM terminal 8
- through body grounds E15 and E24.

When the proper signal, or combination of signals, is received by the combination meter, the warning chime will sound.

IGNITION KEY WARNING CHIME

Power is supplied

- through key switch and key lock solenoid terminal 4
- to BCM terminal 62.

Ground is supplied

- to BCM terminal 14
- through front door switch LH terminal 2

- through front door switch LH case ground.

With the key inserted in the ignition switch, and the driver door open, the ignition key warning chime will sound.

LIGHT WARNING CHIME

With the key removed from the ignition switch, the driver door open, and the lighting switch in 1ST or 2ND position, the warning chime will sound. [Except when headlamp battery saver control operates (for 5 minutes after ignition switch is turned to OFF or ACC position) and headlamps do not illuminate.]
Signal is supplied

- from combination switch (lighting switch) terminals 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10
- to BCM terminals 40, 41, 42, 43, 47, 48, 49, 50, 51 and 52.

Ground is supplied

- to BCM terminal 14
- through front door switch LH terminal 2
- through front door switch LH case ground.

With these conditions, when power and ground are supplied, the light warning chime sounds.

SEAT BELT WARNING CHIME

With the driver seat belt unfastened (seat belt buckle switch LH ON), warning chime will sound for approximately 6 seconds after the ignition switch is turned ON.
Ground is supplied

- to combination meter terminal 28
- through seat belt buckle switch LH terminal 1
- through seat belt buckle switch LH terminal 2
- through body grounds B7 and B19.

With these conditions, when power and ground are supplied, the seat belt warning chime sounds.

BOARD COMPUTER

PFP:24810

System Description

EKS003GI

FUNCTION

The board computer can indicate the following items.

- Outside air temperature
- DTE (distance to empty)
- Trip distance
- Trip time
- Average fuel consumption
- Average vehicle speed

OUTSIDE AIR TEMPERATURE INDICATION

The outside air temperature indication is displayed while the ignition switch is in the ON position.
Signal is supplied

- through ambient sensor terminal 1
- to combination meter (board computer) terminal 13.

Indication range is between -30 and 55°C (-22 and 131°F). When outside temperature is less than -30°C (-22°F), display shows ICY. When outside temperature is more than 55°C (131°F), indication will be blank. When outside temperature is less than 3°C (37°F) continuously, display will blink as a warning. In this case, the display will change to the outside air temperature mode even though the display is showing a different mode. The indicated temperature is not affected by engine heat. It changes only when one of the following conditions exists.

- When vehicle speed is more than 20 km/h (12 MPH).
- The ignition switch has been turned OFF for more than 3.5 hours.
- When outside air temperature is less than the indicated temperature.

DTE (DISTANCE TO EMPTY) INDICATION

The range indication provides the driver with an estimation of the distance that can be driven before refueling. The range is calculated by signals from the fuel level sensor unit (fuel remaining), ECM (fuel consumption) and vehicle speed sensor. The indication will be refreshed every 30 seconds. When fuel remaining is less than approximately 10 ℓ (10 5/8 US quarts, 8 3/4 Imp quarts), the indication will blink as a warning. If the fuel remaining is less than approximately 8 ℓ (8 1/2 US quarts, 7 Imp quarts), the indication will show "---". In this case, the display will change to the DTE mode even though the display is showing a different mode. When the battery is disconnected and reconnected, DTE mode will display "---" until the vehicle is driven 500 miles (804.5 km).

TRIP DISTANCE

Trip distance is calculated by signal from the vehicle speed sensor. If trip distance is reset, trip time will be reset at the same time.

TRIP TIME

Trip time displays cumulative ignition switch ON time. If trip time is reset, trip distance will be reset at the same time.

AVERAGE FUEL CONSUMPTION

Average fuel consumption indication is calculated by signals from the vehicle speed sensor and the ECM (fuel consumption). The indication will be refreshed every 30 seconds.

AVERAGE VEHICLE SPEED

Average vehicle speed indication is calculated by running distance and running time. The indication will be refreshed every 30 seconds. If average vehicle speed is reset, average fuel consumption will be reset at the same time. After resetting, the display will show "---" for 30 seconds.

HOW TO CHANGE/RESET INDICATION

Indication can be changed in the following order by momentarily depressing the board computer switch or the board computer steering switch.
Outside air temperature → dte → Average fuel consumption → Average vehicle speed → Trip time → Trip distance.

Holding the switch for more than 0.8 second will reset the indication of the currently displayed mode (trip distance, trip time, average vehicle speed or average fuel consumption).

NOTE:
After the display changes automatically, the indication can be changed to the last mode by pushing the board computer switch or the board computer steering switch.
