### **PREPARATION**

## PREPARATION PFP:00002

# **Special Service Tool**

EBS00J8J

The actual shapes of Kent-Moore tools may diffe Tool number (Kent-Moore No.) Tool name		Description
KV10114400 (J-38365) Heated oxygen sensor wrench	S-NT636	Loosening or tightening heated oxygen sensors: a: 22 mm (0.87 in)

## **Commercial Service Tools**

EBS00J8K

(Kent-Moore No.) Tool name		Description
(J-43897-18) (J-43897-12) Oxygen sensor thread cleaner	Mating surface shave cylinder	Reconditioning the exhaust system threads before installing a new oxygen sensor (Use with anti-seize lubricant shown below): a: J-43897-18 (18 mm dia.) for zirconia oxygen sensor b: J-43897-12 (12 mm dia.) for titania oxygen sensor
Anti-seize lubricant (Permatex 133AR or equivalent meeting MIL specification MIL-A-907)	AEM489	Lubricating oxygen sensor thread cleaning tool when reconditioning exhaust system threads
Power tool	PBIC0190E	Loosening nuts and bolts

## **EXHAUST SYSTEM (QR25DE)**

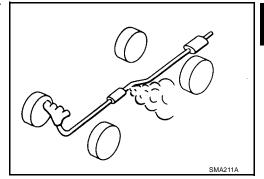

## **EXHAUST SYSTEM (QR25DE)**

## **Checking Exhaust System**

Check the exhaust pipes, muffler, and mounting components for incorrect attachment, leaks, cracks, damage, or deterioration.

## **Removal and Installation**

EBS00J8M

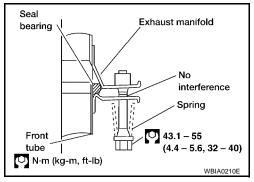

- 1. Rear muffler
- 4. Center exhaust tube hanger
- 7. Front exhaust tube spring
- 10. Gasket

- 2. Rear muffler bracket (ground strap)
- 5. Exhaust manifold
- 8. Front exhaust tube hanger
- 3. Center exhaust tube
- 6. Front exhaust tube
- 9. Seal bearing

## **EXHAUST SYSTEM (QR25DE)**

#### **CAUTION:**

- Use genuine NISSAN exhaust system parts or equivalent, which are specifically designed for heat resistance, corrosion resistance, and shape.
- Perform the procedure with the exhaust system fully cooled down because the system will be hot just after the engine is turned off.
- Be careful not to cut your hand on the insulator edges.
- If the insulator is badly deformed, repair or replace it. If deposits such as mud pile up on the insulator, clean and inspect the insulator.
- When installing the insulator avoid large gaps or interference between the insulator and each exhaust pipe.
- Remove deposits from the sealing surface of each connection. Connect them securely to avoid exhaust gas leaks.
- Temporarily tighten the exhaust manifold side mounting nuts and the vehicle side mounting bolts.
   Check each part for any interference, and then tighten the nuts and bolts to specification.
- When installing each mounting rubber, avoid twisting or excessive extension in up/down and right/left directions.
- Tighten the mounting bolts without causing interference with the flange.
- Insert the seal bearing in the direction as shown. Tighten the mounting bolt with the big end of the spring facing the flange as shown.

## **Inspection After Installation**

FBS00J8N

- With the engine running, check the exhaust tube joints for exhaust gas leaks and abnormal noise.
- Check that the mounting brackets and mounting insulators are installed properly and free from excessive stress. Improper installation could result in excessive noise, leaks, and vibration.

: N·m (kg-m, ft-lb)

: Always replace after every disassembly.

- RH rear muffler
- LH rear muffler bracket
- Front exhaust tube
- 10. RH exhaust manifold
- LH rear muffler
- Center exhaust tube hanger
- Front exhaust tube hanger
- 11. Gasket

- RH rear muffler bracket with ground strap
- Center exhaust tube
- LH exhaust manifold

### **EXHAUST SYSTEM (VQ35DE)**

#### **CAUTION:**

- Use genuine NISSAN exhaust system parts or equivalent, which are specifically designed for heat resistance, corrosion resistance, and shape.
- Perform the procedures with the exhaust system fully cooled down because the system will be hot
  just after the engine is turned off.
- Be careful not to cut your hand on the insulator edge.
- Always replace the exhaust gaskets with new ones for installation.
- If any insulator is badly deformed, repair or replace it. If deposits such as mud pile up on the insulator, clean and inspect them.
- When installing the insulator avoid large gaps or interference between the insulator and the exhaust pipe.
- Remove any deposits from the sealing surface of each connection. Connect them securely to avoid exhaust gas leakage.
- Temporarily tighten the mounting nuts on the exhaust manifold side and the mounting bolts on the vehicle side. Check each part for interference with other components, and then tighten the nuts and bolts to specification.
- When installing each mounting rubber, avoid twisting or any over extension in up/down and right/ left directions.

## **Inspection After Installation**

EBS00J8Q

- With the engine running, check the exhaust tube joints for exhaust gas leaks and unusual noises.
- Check that the mounting brackets and mounting insulators are installed properly and free from excessive stress. Improper installation could result in excessive noise, leaks, and vibration.
