PRECAUTIONS

PFP:00001

Precautions For Liquid Gasket

EBS00EYR

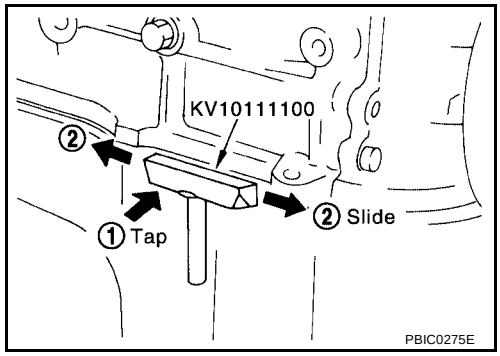
REMOVAL OF LIQUID GASKET

- After removing the mounting bolts and nuts, disconnect and remove the sealant using a seal cutter.

CAUTION:
Be careful not to damage the mating surfaces.

- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap the liquid gasket applied area.

CAUTION:
If for some unavoidable reason a tool such as a flat-blade screwdriver is used, be careful not to damage the mating surfaces.

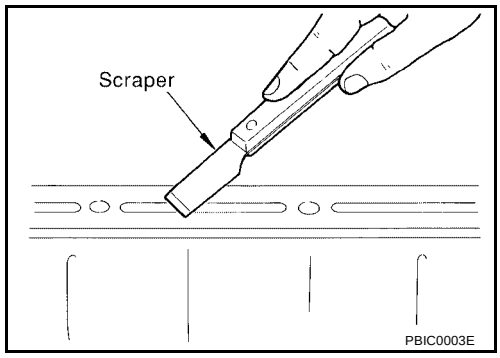


LIQUID GASKET APPLICATION PROCEDURE

1. Using a scraper, remove the old sealant adhering to the application surface and the mating surface.

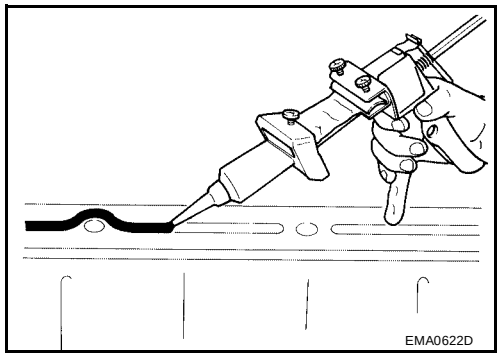
- Remove the old sealant completely from the groove of the application surface, mounting bolts, and bolt holes.

2. Thoroughly clean the application surface and the mating surface to remove adhering moisture, grease and foreign material.
3. Attach the sealant tube to the tube presser.
   Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .

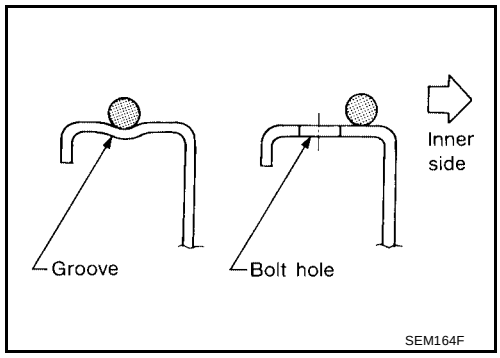


4. Apply the sealant without breaks to the specified location with the specified dimensions.

- If there is a groove for the sealant application, apply the sealant to the groove.



- As for the bolt holes, normally apply the sealant inside the holes. Occasionally, it should be applied outside the holes.
- Within five minutes of sealant application, install the mating component.
- If the sealant protrudes, wipe it off immediately.
- Do not retighten after the installation.
- After 30 minutes or more have passed from the installation, fill the engine with the specified oil and coolant. Refer to MA-13, "RECOMMENDED FLUIDS AND LUBRICANTS" .



PREPARATION

PFP:00002

Special Service Tools

EBS00CH2

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
EG17650301 (J33984-A) Radiator cap tester adapter  NT564	Adapting radiator cap tester to radiator filler neck **a: 28 (1.10) via.** **b: 31.4 (1.236) via.** **c: 41.3 (1.626) via.** Unit: mm (in)
KV99103510 (—) Radiator plate pliers A  S-NT224	Installing radiator upper and lower tanks
KV99103520 (—) Radiator plate pliers B  S-NT225	Removing radiator upper and lower tanks

OVERHEATING CAUSE ANALYSIS

PFP:00012

Troubleshooting Chart

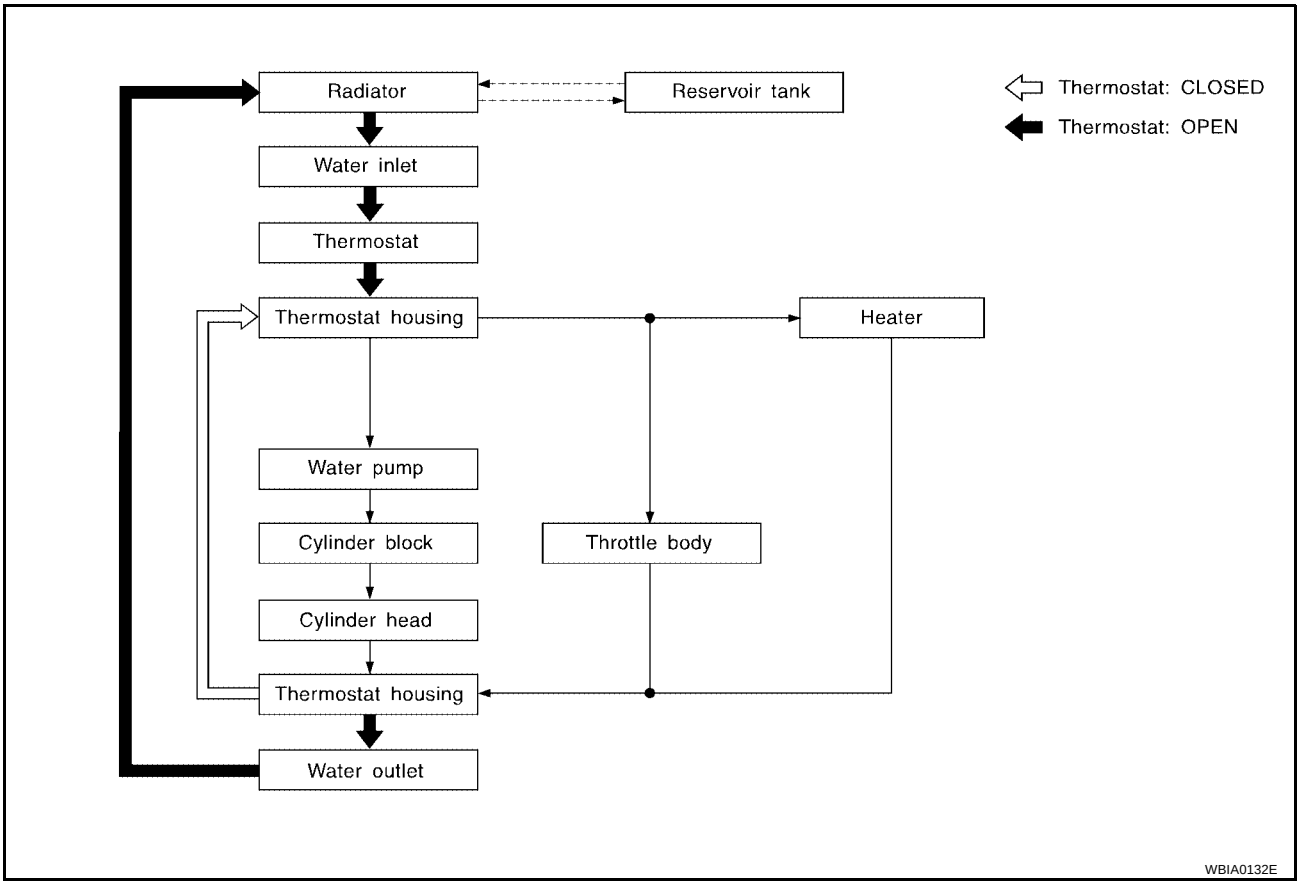
		Blocked condenser		

COOLING SYSTEM

PFP:21020

Cooling Circuit

EBS00CH4



ENGINE COOLANT

PFP:KQ100

System Check

EBS00CH5

WARNING:
Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure fluid escaping from the radiator.
Wrap a thick cloth around the cap. Slowly push down and turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by pushing down and turning it all the way.

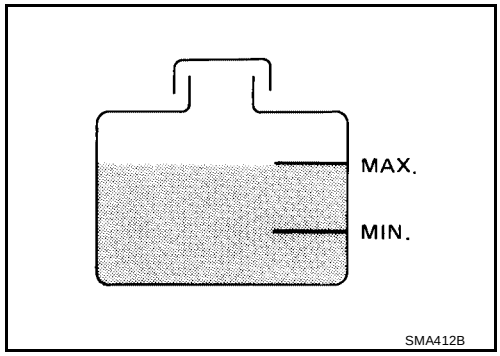
CHECKING COOLING SYSTEM HOSES

Check hoses for the following:

- Improper attachment
- Leaks
- Cracks
- Damage
- Loose connections
- Chafing
- Deterioration

CHECKING RESERVOIR LEVEL

- Check if the reservoir tank coolant level is within MIN to MAX when the engine is cool.
- Adjust coolant level if it is too much or too little.



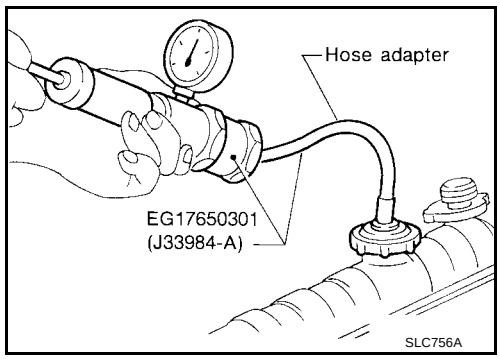
CHECKING COOLING SYSTEM FOR LEAKS

To check for leakage, apply pressure to the cooling system with a tester.

Testing pressure : 157 kPa (1.6 kg/cm^2 , 23 psi)

WARNING:
Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.

CAUTION:
Higher pressure than specified may cause radiator damage.



CHECKING RADIATOR

Check radiator for mud or clogging. If necessary, clean radiator as follows.

- Be careful not to bend or damage the radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, radiator shroud and horns. Then tape the harness and connectors to prevent water from entering.

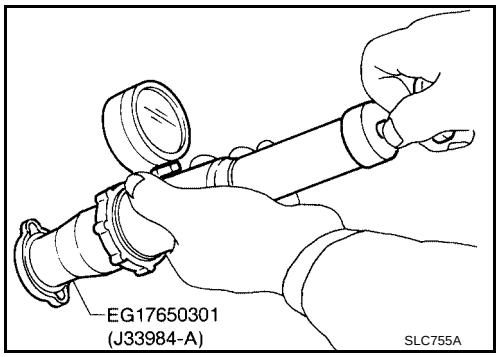
1. Apply water by hose to the back side of the radiator core vertically downward.
2. Apply water again to all radiator core surfaces once per minute.
3. Stop washing when clear water flows off the radiator.
4. Blow air into the back side of radiator core vertically downward.
   - Use compressed air lower than 490 kPa (5 kg/cm^2 , 71 psi) and keep distance more than 300 mm (11.8 in).

5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.
6. Check for leakage.

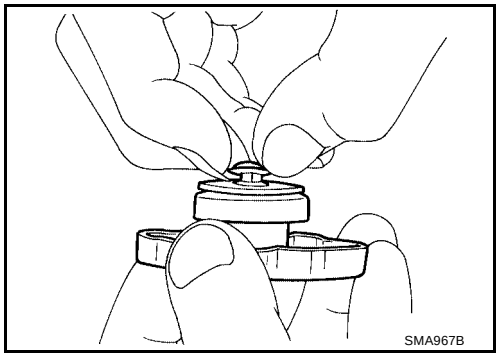
CHECKING RADIATOR CAP

- To check radiator cap, apply pressure to cap with a tester.

Radiator cap relief pressure	
Standard	**: 78 - 98 kPa (0.8 - 1.0 kg/cm^2 , 11 - 14 psi)**
Limit	**: 59 kPa (0.6 kg/cm^2 , 9 psi)**



- Pull the negative pressure valve to open it.
- Check that it closes completely when released.



Refilling Engine Coolant

EBS00CH6

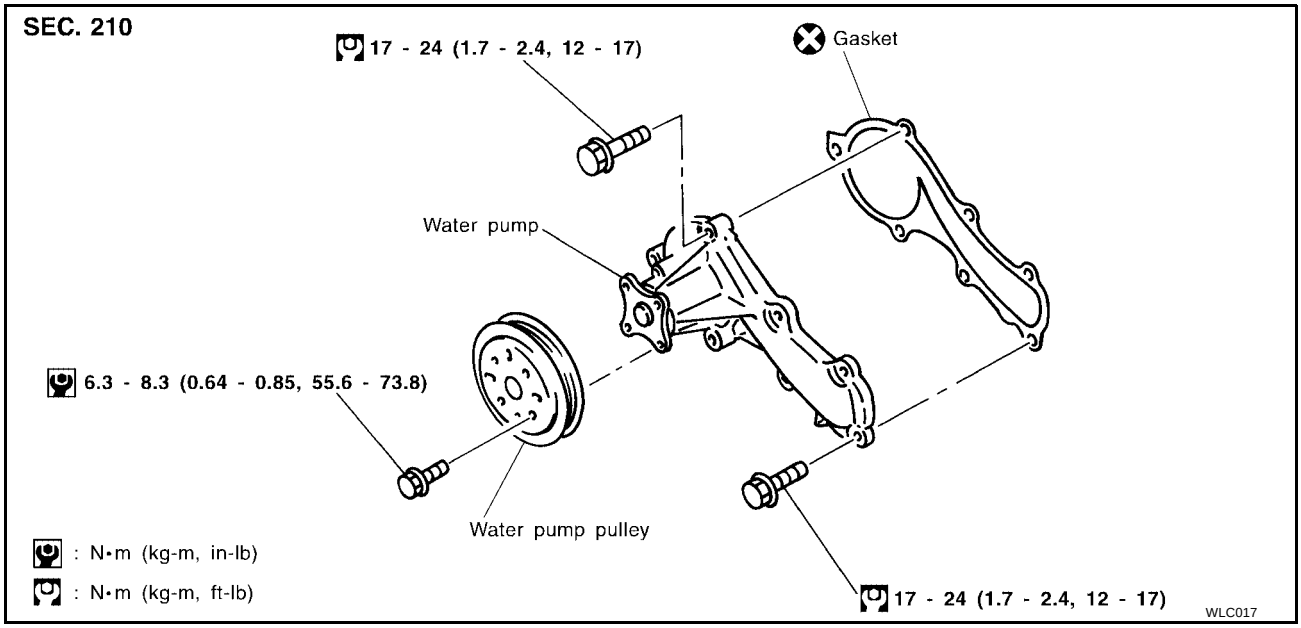
Changing the engine coolant is part of the required maintenance of the engine. Refer to MA-16, "Changing Engine Coolant" .

WATER PUMP

PFP:21020

Removal and Installation

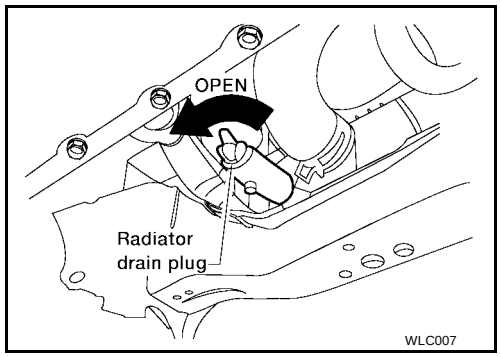
EBS00CH7

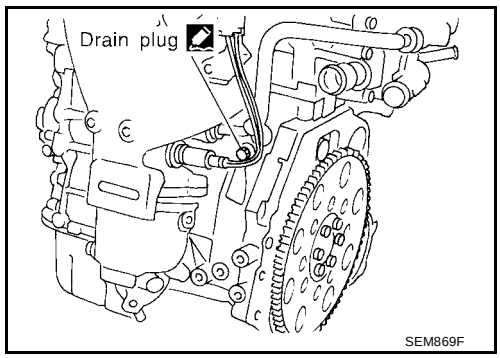


CAUTION:

- **When removing water pump assembly, be careful not to get coolant on drive belt.**
- **Water pump cannot be disassembled and should be replaced as a unit.**
- **After installing water pump, check for leaks using radiator cap tester. Refer to CO-7, "CHECKING COOLING SYSTEM FOR LEAKS" .**

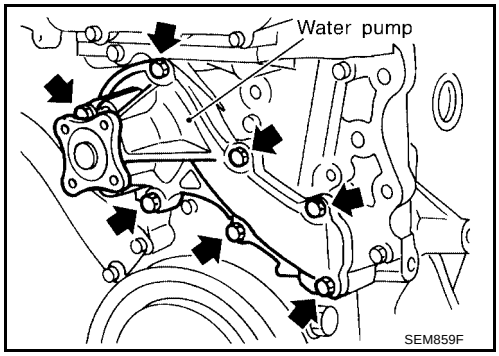
1. Drain engine coolant.
   Refer to MA-16, "DRAINING ENGINE COOLANT" .





2. Remove front RH wheel.
3. Remove engine side cover.
4. Remove drive belts and idler pulley.
5. Loosen water pump pulley bolts.
6. Remove water pump pulley.

7. Remove the water pump bolts.
8. Remove the water pump.
   - Remove liquid gasket from water pump and mating surface of cylinder block using a scraper.
9. Installation is in the reverse order of removal.
   - When applying liquid gasket to mating surface of water pump, use Genuine Anaerobic Liquid Gasket or equivalent. Refer to GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .
   - When filling radiator with coolant, refer to MA-17, "REFILLING ENGINE COOLANT" .
   - When installing drive belts, refer to MA-16, "Checking Drive Belts" .

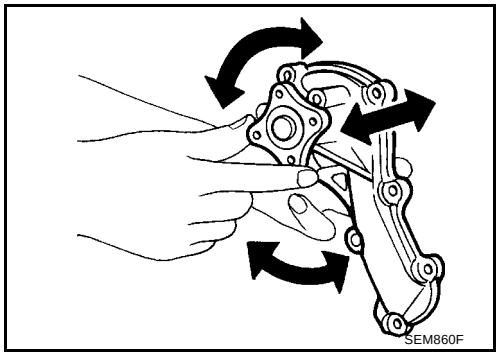


Inspection

EBS00CH8

1. Rotate water pump shaft, replace the water pump as necessary.

- **Check body assembly and vane for rust or corrosion.**
- **Check for rough operation due to excessive end play.**

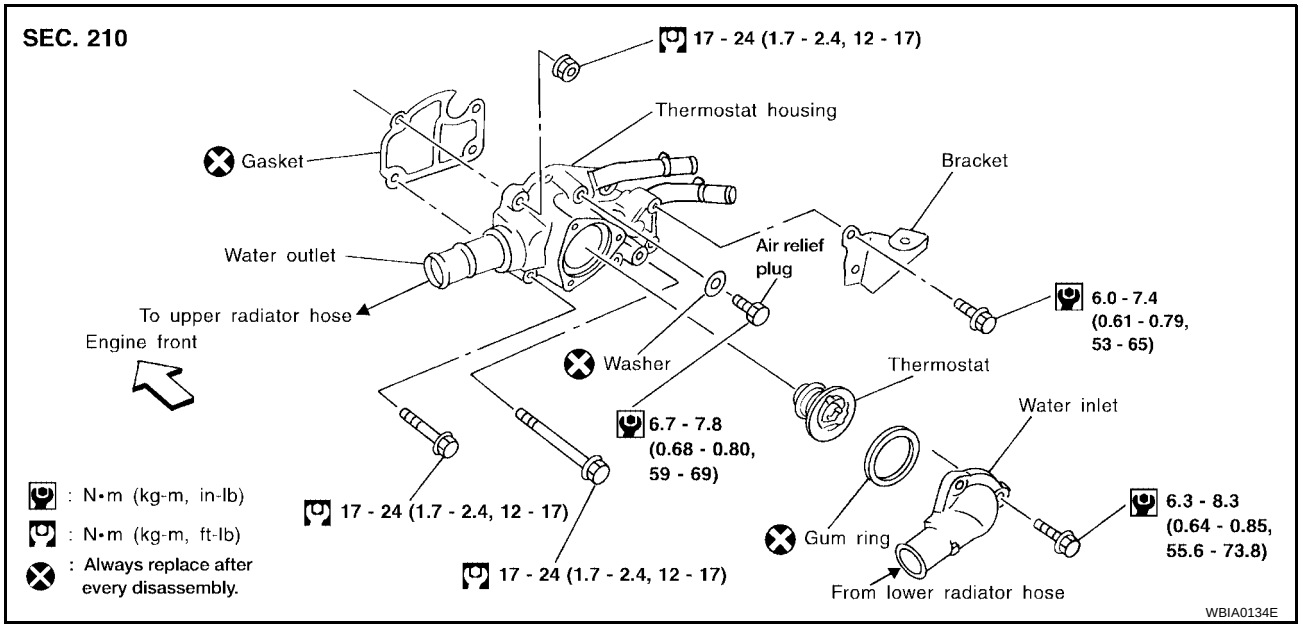


THERMOSTAT AND THERMOSTAT HOUSING

PFP:21200

Removal and Installation

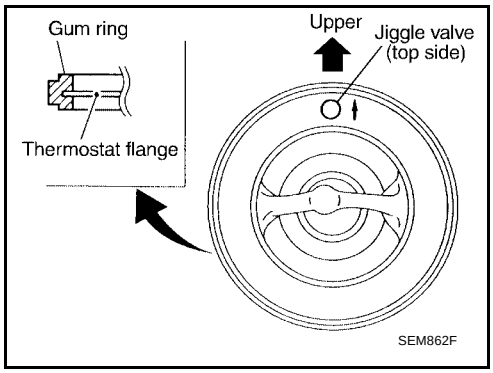
EBS00CH9



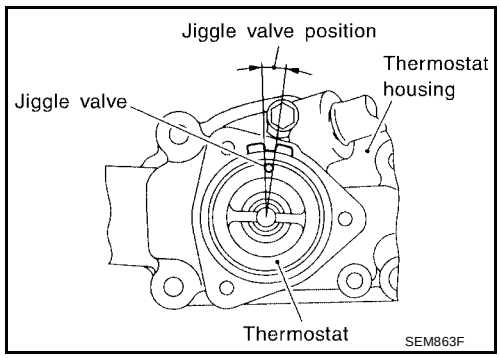
CAUTION:

Be careful not to spill coolant over the engine compartment. Use a rag to absorb any spilled coolant.

1. Drain engine coolant. Refer to MA-16, "DRAINING ENGINE COOLANT" .
2. Disconnect the lower radiator hose.
3. Remove water inlet thermostat housing, then remove the thermostat.
4. Before installing the thermostat, make sure the gum ring is properly seated around the thermostat.



5. Install thermostat with jiggle valve or air bleeder at upper side.
6. Refill engine coolant after installation. Run engine for a few minutes, and check for any coolant leaks. Refer to MA-17, "REFILLING ENGINE COOLANT"

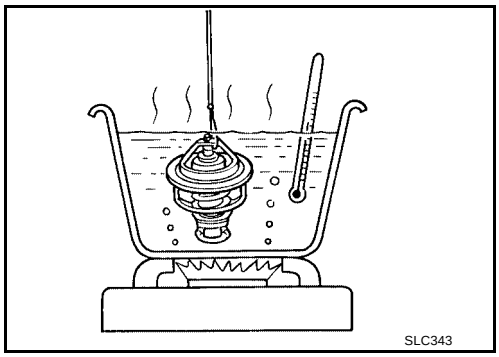


Inspection

EBS00CHA

1. Check for valve seating condition at normal room temperature. The valve should seat tightly all the way around. If the valve is warped or stuck open, replace the thermostat.
2. Suspend the thermostat, by a string caught in the closed valve, in boiling water while monitoring the temperature.

Valve opening temperature °C (°F)	76.5° (170°)
Valve lift mm/°C (in/°F)	More than 9/90° (0.35/194°)



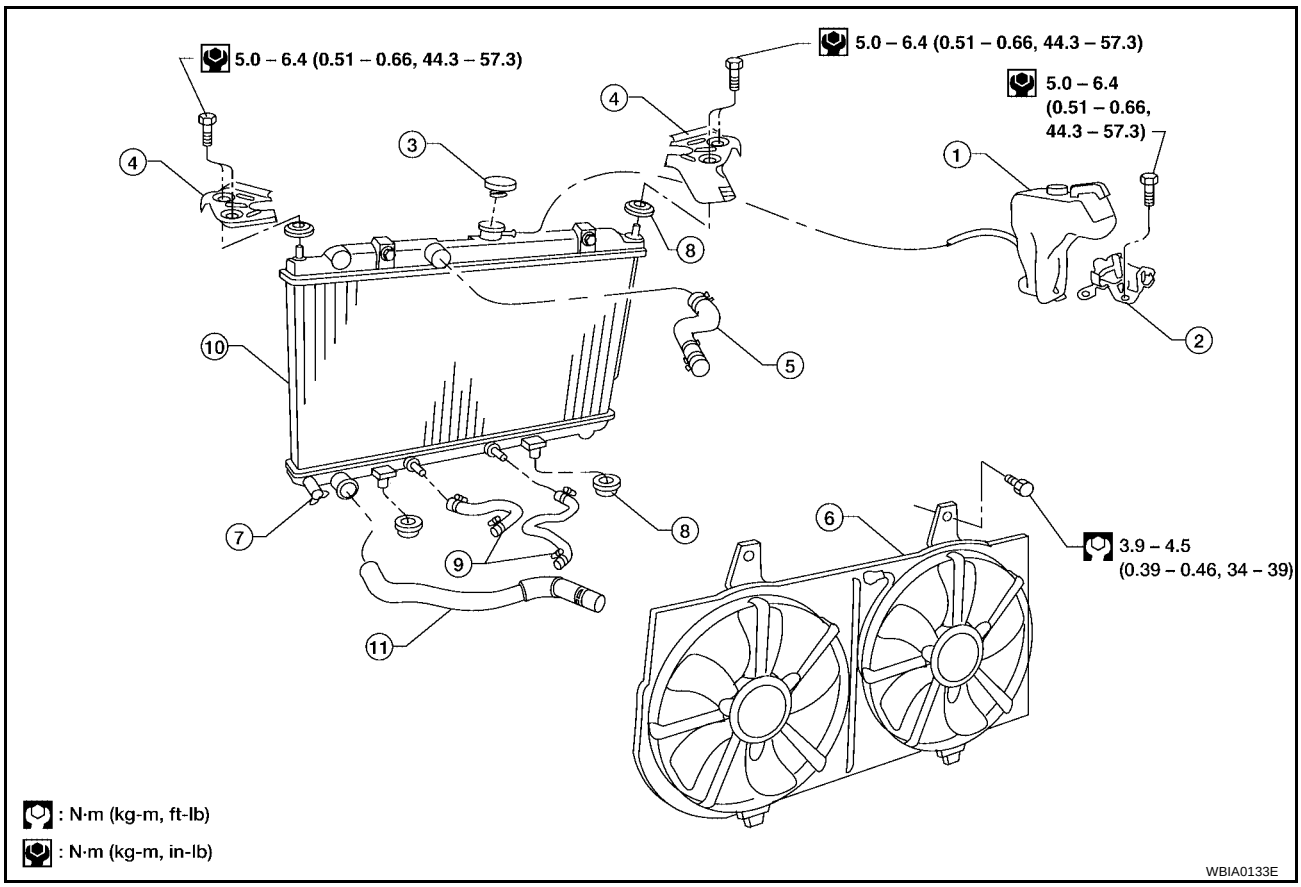
3. Check the temperature at which the valve begins to open and falls from the string. Check the total valve lift when the valve opens completely.
4. Then check if valve closes at 5°C (41°F) below valve opening temperature.

RADIATOR

PFP:21400

Removal and Installation

EBS00CHB



1. Reservoir tank	2. Reservoir tank bracket	3. Radiator cap
4. Mounting bracket	5. Upper radiator hose	6. Cooling fans
7. Radiator drain plug	8. Mounting rubber	9. Oil cooler hose (A/T models)
10. Radiator	11. Lower radiator hose	

WARNING:

Never remove the radiator cap when the engine is hot. Serious burns can occur from high pressure coolant escaping from the radiator. Wrap a thick cloth around the cap. Slowly push down and turn it a quarter of a turn to allow the built-up pressure to escape. Carefully remove the cap by pushing down and turning it the rest of the way.

REMOVAL

1. Drain engine coolant. Refer to MA-16, "DRAINING ENGINE COOLANT" .
2. Remove the air duct and air cleaner assembly.
3. Disconnect the A/T oil cooler hoses (if equipped) and install a blind plug in the hoses to prevent A/T oil loss.
4. Disconnect the upper and lower radiator hoses and mounting bracket.
5. Remove the radiator and radiator fan assembly as one unit.

   CAUTION:

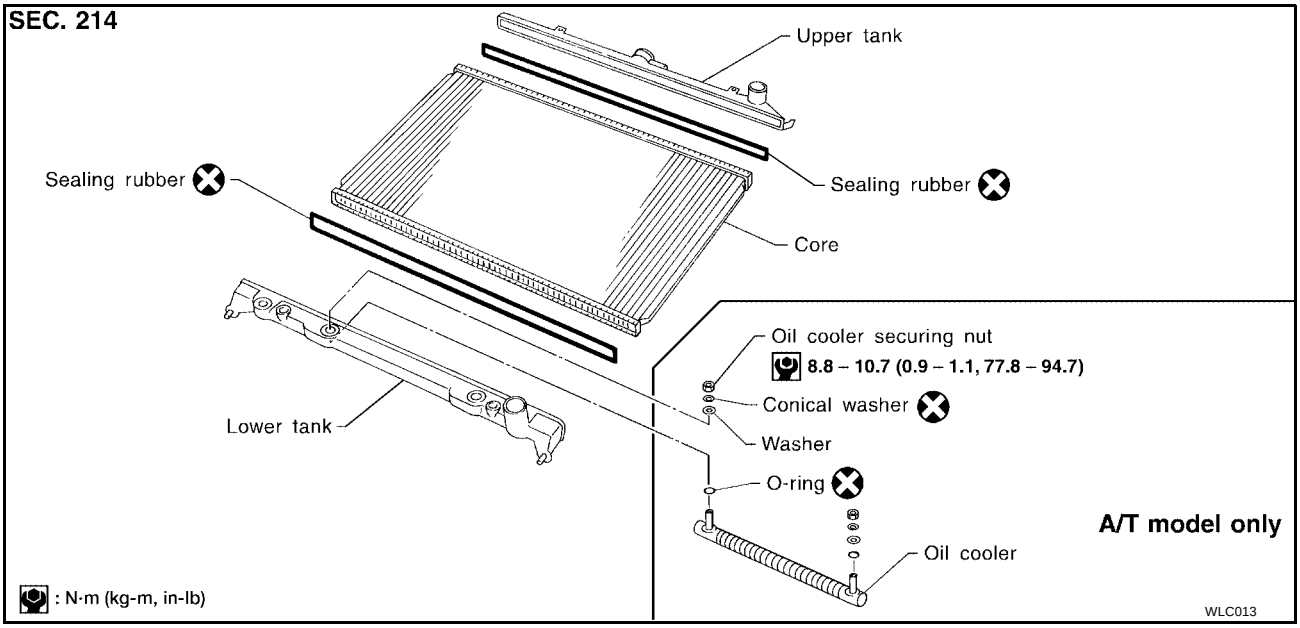
   Do not damage or scratch the radiator core when removing.

INSTALLATION

- Installation is in the reverse order of removal.

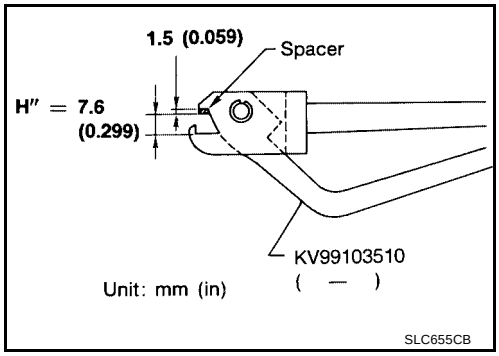
Disassembly and Assembly

EBS00CHC



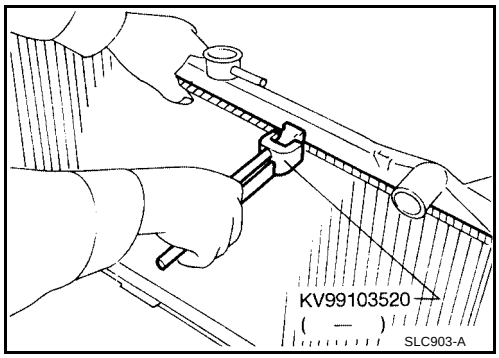
PREPARATION

1. Attach the spacer to the tip of the radiator plate pliers A. Spacer specification: 1.5 mm (0.059 in) thick x 18 mm (0.71 in) wide x 8.5 mm (0.335 in) long.
2. Make sure that when radiator plate pliers A are closed dimension H″ is approx. 7.6 mm (0.299 in).
3. Adjust dimension H″ with the spacer, if necessary.



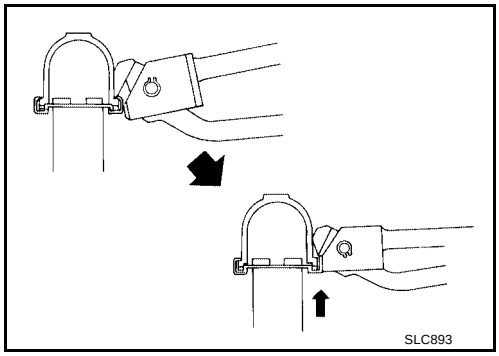
DISASSEMBLY

1. Remove tank with Tool.



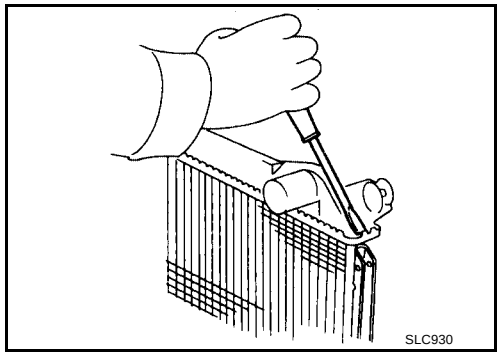
- Grip the crimped edge and bend it upwards so that Tool slips off.

CAUTION:
Do not bend excessively.

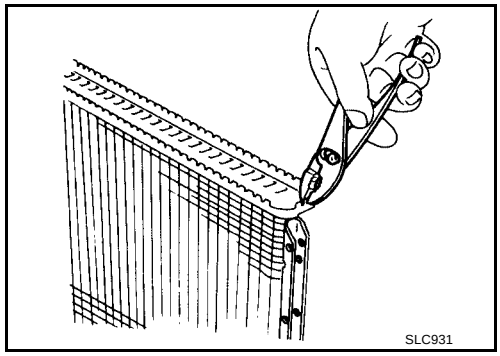


- In areas where Tool cannot be used, use a screwdriver to bend the edge up.

CAUTION:
Be careful not to damage tank.



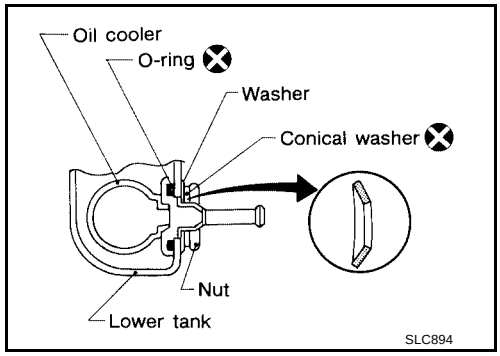
2. Make sure the edge stands straight up.
3. Remove oil cooler from tank (A/T model only).



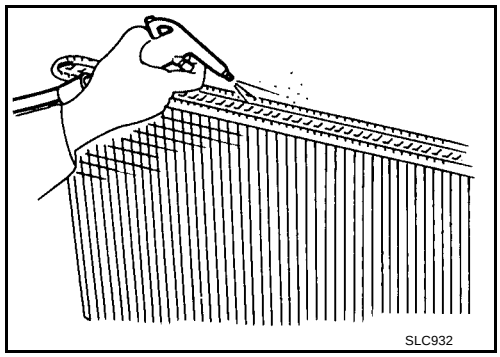
ASSEMBLY

1. Install oil cooler (A/T model only).

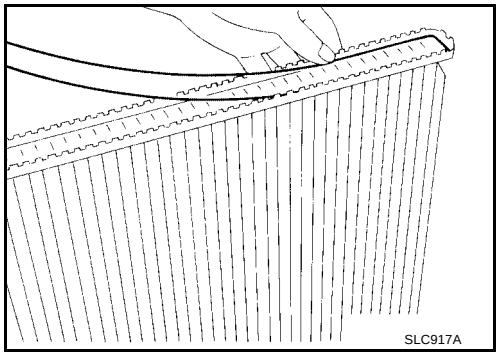
- **Pay attention to direction of conical washer.**



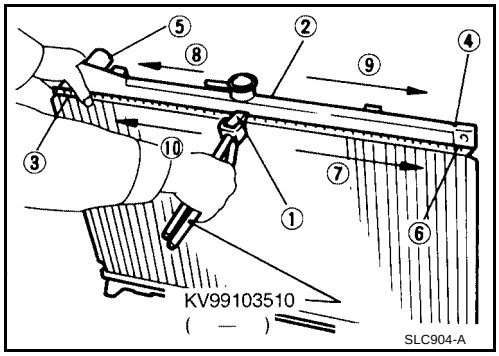
2. Clean contact portion of tank.

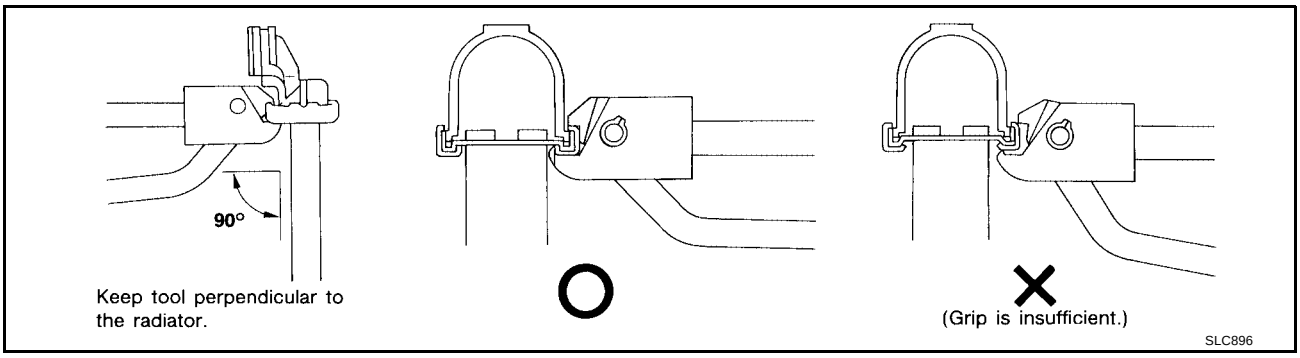


3. Install sealing rubber.
- **Push it in with fingers.**
- **Be careful not to twist sealing rubber.**

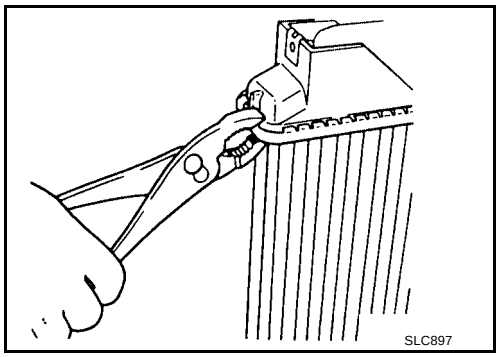


4. Crimp the tank rim in a specified sequence with the Tool.





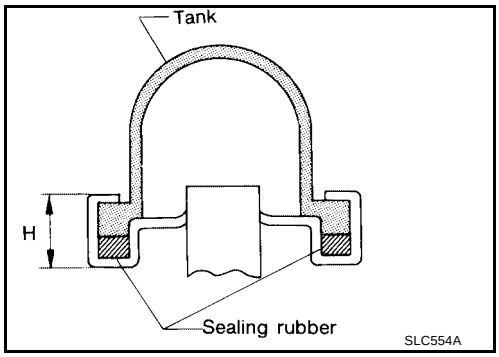
- Use pliers in the locations where the Tool cannot be used.



5. Make sure that the tank rim is completely crimped down.

Standard height “H” : 8.0 - 8.4 mm (0.315 - 0.331 in)

6. Check for any coolant leakage. Refer to CO-7, "CHECKING COOLING SYSTEM FOR LEAKS" .

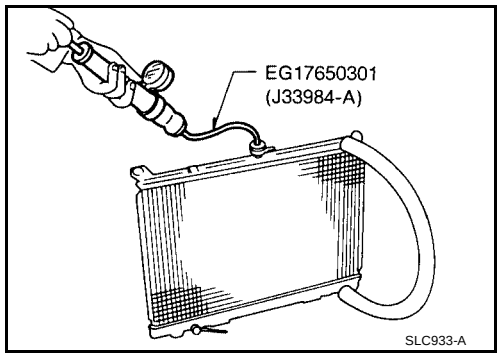


Inspection

EBS00CHD

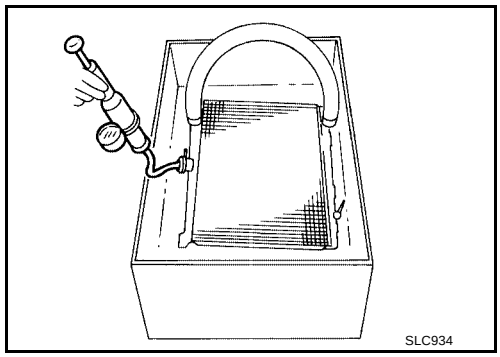
1. Apply pressure with Tool.

Specified pressure value : 157 kPa (1.6 kg/cm^2 , 23 psi)



WARNING:
To prevent the risk of the hose coming undone while under pressure, securely fasten it down with a hose clamp. Attach a hose to the oil cooler as well (A/T model only).

2. Check for leaks.

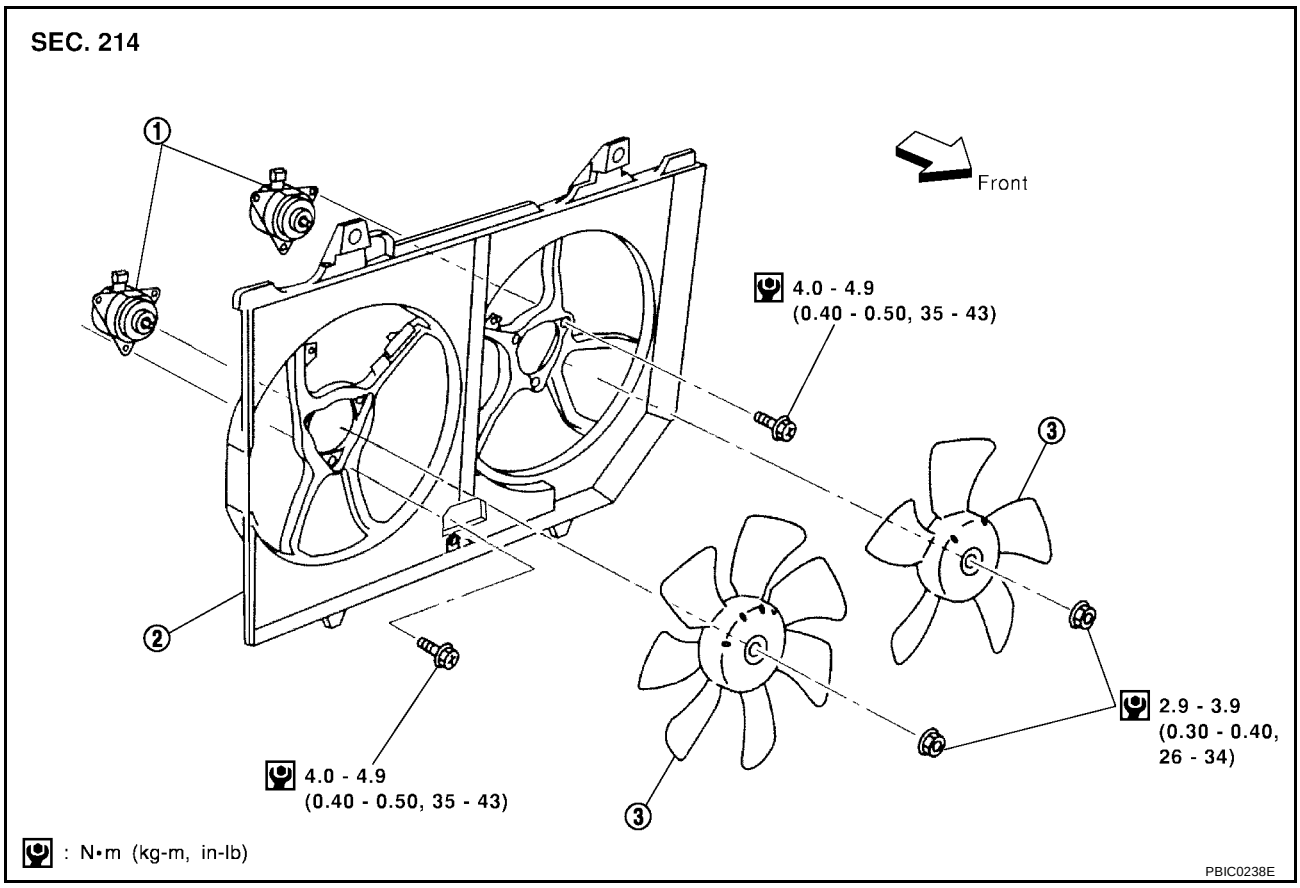


COOLING FAN

PFP:21486

Disassembly and Assembly Radiator Cooling Fan

EBS00CHE



1. Cooling fan motors
2. Cooling fan shroud
3. Cooling fan blades

DISASSEMBLY

1. Remove the radiator and cooling fan assembly. Refer to CO-13, "Removal" .
2. Remove the cooling fan shroud assembly from the radiator.
3. Remove the cooling fan blades from the shroud.
4. Remove cooling fan motors from the shroud.

ASSEMBLY

- Assembly is in the reverse order of disassembly.

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

Thermostat

EBS00CHF

Valve opening temperature °C (°F)	76.5° (170°)
Valve lift mm/°C (in/°F)	More than 9/90° (0.35/194°)

Radiator

EBS00CHG

Unit: kPa (kg/cm^2 , psi)

Cap relief pressure	Standard	78 - 98 (0.8 - 1.0, 11 - 14)
	Limit	59 (0.6, 9)
Leakage test pressure		157 (1.6, 23)

PRECAUTIONS

PFP:00001

Precautions For Liquid Gasket

EBS00CHH

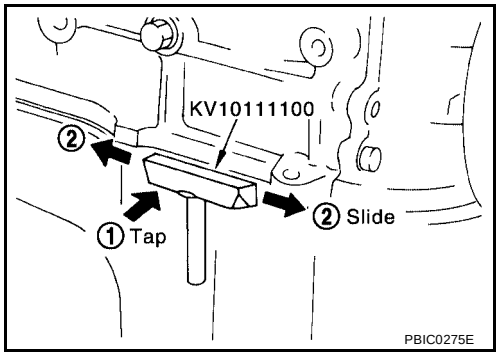
REMOVAL OF LIQUID GASKET

- After removing the mounting bolts and nuts, disconnect and remove the sealant using a seal cutter.

CAUTION:
Be careful not to damage the mating surfaces.

- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap the sealant applied area.

CAUTION:
If for some unavoidable reason a tool such as a flat-blade screwdriver is used, be careful not to damage the mating surfaces.

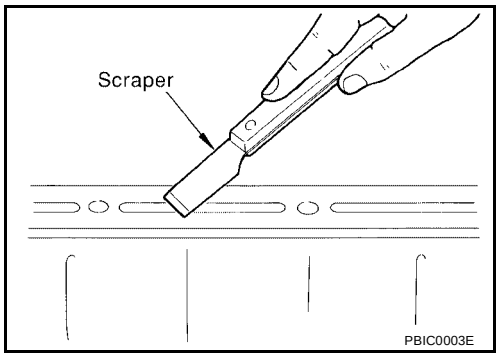


LIQUID GASKET APPLICATION PROCEDURE

1. Using a scraper, remove the old sealant adhering to the application surface and the mating surface.

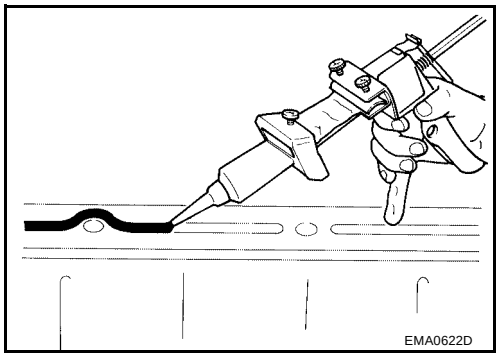
- Remove the old sealant completely from the groove of the application surface, mounting bolts, and bolt holes.

2. Thoroughly clean the application surface and the mating surface to remove adhering moisture, grease and foreign material.
3. Attach the sealant tube to the tube presser.
   Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .

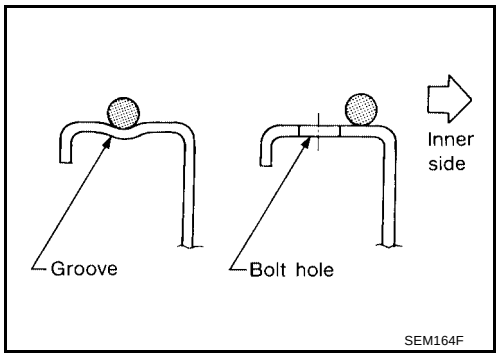


4. Apply the sealant without breaks to the specified location with the specified dimensions.

- If there is a groove for the sealant application, apply the sealant to the groove.



- As for the bolt holes, normally apply the sealant inside the holes. Occasionally, it should be applied outside the holes.
- Within five minutes of sealant application, install the mating component.
- If the sealant protrudes, wipe it off immediately.
- Do not retighten after the installation.
- After 30 minutes or more have passed from the installation, fill the engine with the specified oil and coolant. Refer to MA-13, "RECOMMENDED FLUIDS AND LUBRICANTS" .



PREPARATION

PFP:00002

Special Service Tools

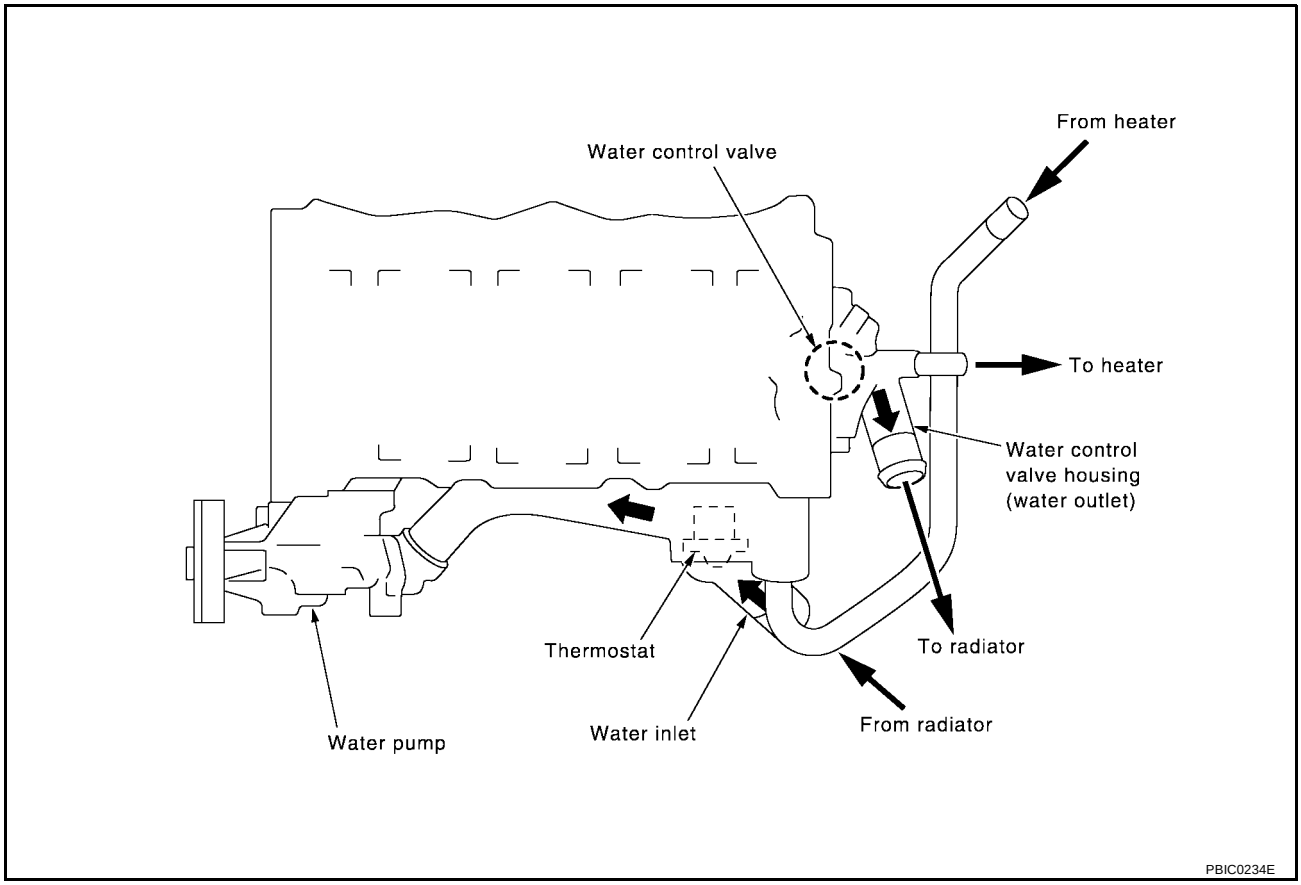
COOLING SYSTEM

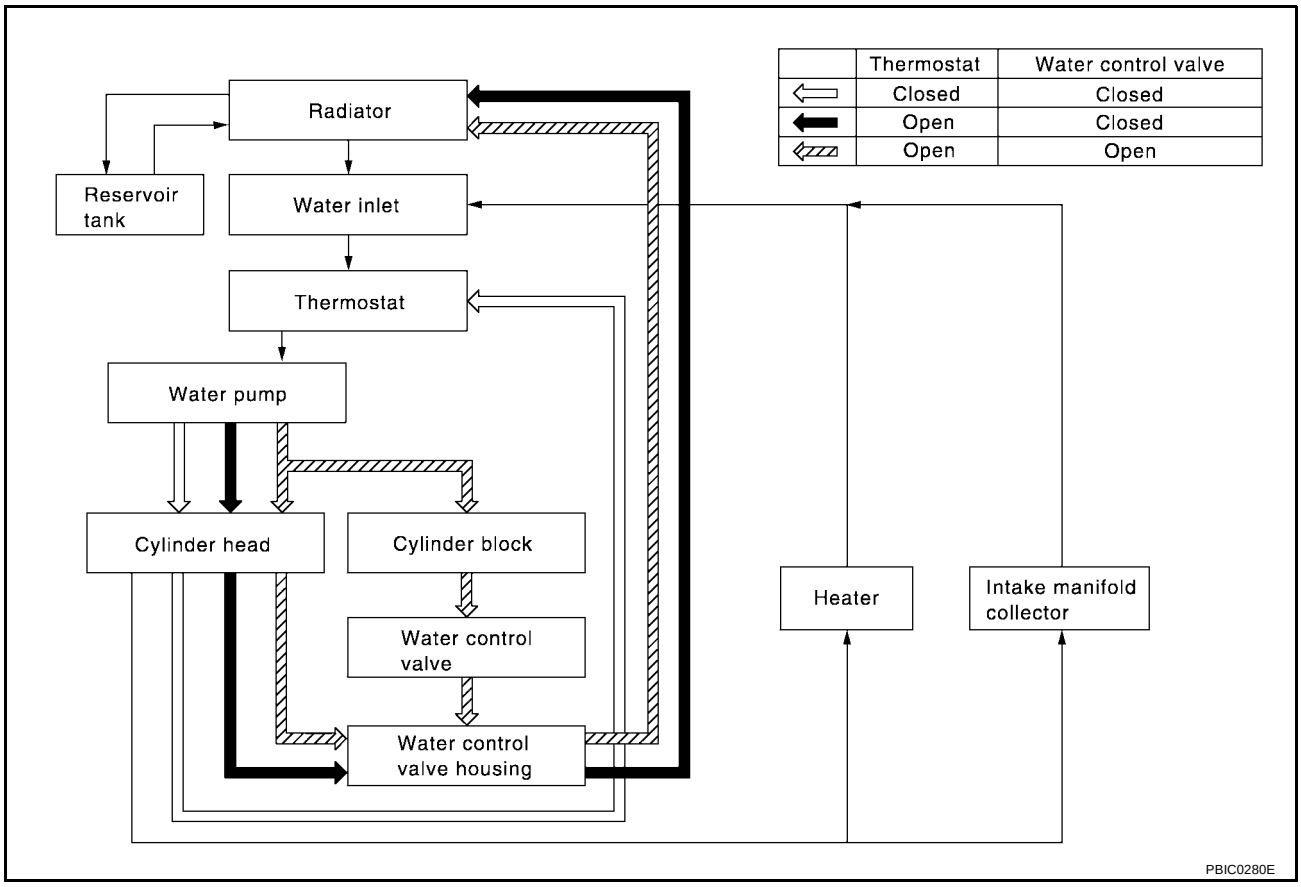
PFP:21020

Cooling Circuit

EBS00CHK



PBIC0234E



PBIC0280E

ENGINE COOLANT

PFP:KQ100

System Check

EBS00EYS

WARNING:
Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure fluid escaping from the radiator.
Wrap a thick cloth around the cap. Slowly push down and turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by pushing down and turning it all the way.

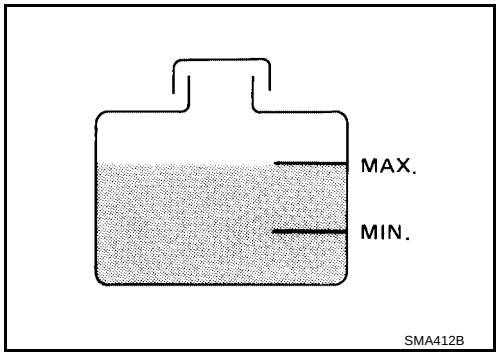
CHECKING COOLING SYSTEM HOSES

Check hoses for the following:

- Improper attachment
- Leaks
- Cracks
- Damage
- Loose connections
- Chafing
- Deterioration

CHECKING RESERVOIR LEVEL

- Check if the reservoir tank coolant level is within MIN to MAX when the engine is cool.
- Adjust coolant level if it is too much or too little.



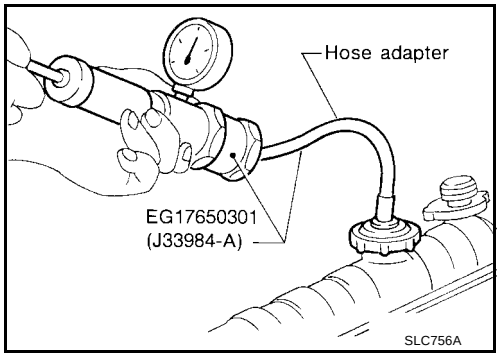
CHECKING COOLING SYSTEM FOR LEAKS

To check for leakage, apply pressure to the cooling system with a tester.

Testing pressure : 157 kPa (1.6 kg/cm^2 , 23 psi)

WARNING:
Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.

CAUTION:
Higher pressure than specified may cause radiator damage.



CHECKING RADIATOR

Check radiator for mud or clogging. If necessary, clean radiator as follows.

- Be careful not to bend or damage the radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, radiator shroud and horns. Then tape the harness and connectors to prevent water from entering.

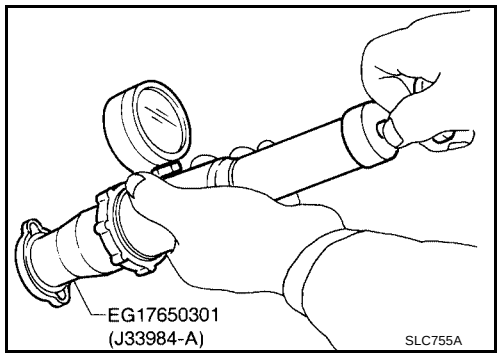
1. Apply water by hose to the back side of the radiator core vertically downward.
2. Apply water again to all radiator core surfaces once per minute.
3. Stop washing when clear water flows off of the radiator.
4. Blow air into the back side of radiator core vertically downward.
   - Use compressed air lower than 490 kPa (5 kg/cm^2 , 71 psi) and keep distance more than 300 mm (11.8 in).

5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.
6. Check for leakage.

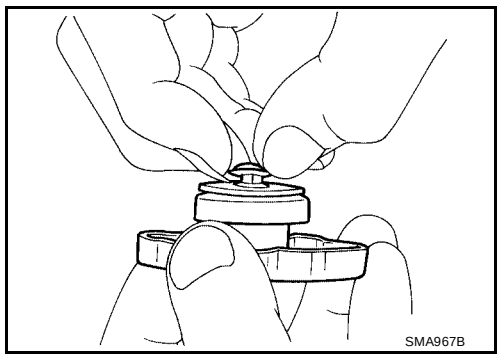
CHECKING RADIATOR CAP

- To check radiator cap, apply pressure to cap with a tester.

Radiator cap relief pressure	
Standard	**: 78 - 98 kPa (0.8 - 1.0 kg/cm^2 , 11 - 14 psi)**
Limit	**: 59 kPa (0.6 kg/cm^2 , 14 psi)**



- Pull the negative pressure valve to open it.
- Check that it closes completely when released.



Refilling Engine Coolant

EBS00EYT

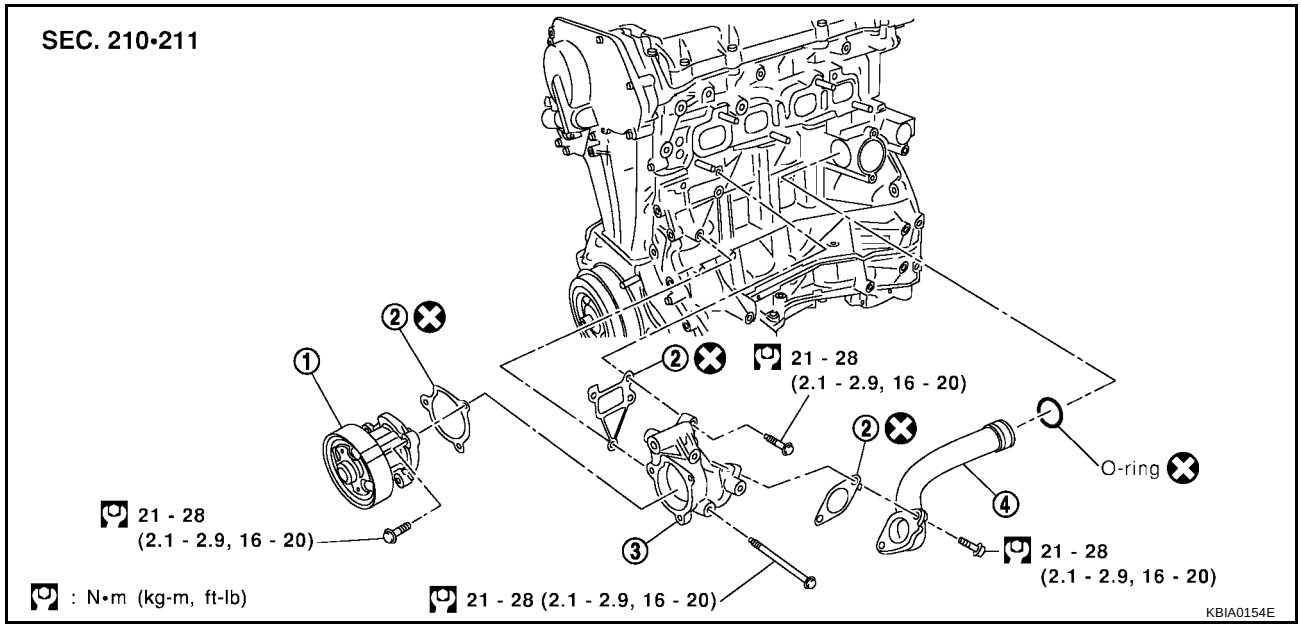
Changing the engine coolant is part of the required maintenance of the engine. Refer to MA-23, "Changing Engine Coolant" .

WATER PUMP

PFP:21020

Removal and Installation

EBS00CHN



1. Water pump
2. Gasket
3. Water pump housing
4. Water pipe

WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.

REMOVAL

Water Pump

1. Drain the engine coolant. Refer to MA-23, "DRAINING ENGINE COOLANT" .

   CAUTION:

   Perform when the engine is cold.
2. Remove the alternator. Refer to SC-32, "Removal" .
3. Remove the water pump.
   - Coolant will leak from the cylinder block, have a drain pan in position.

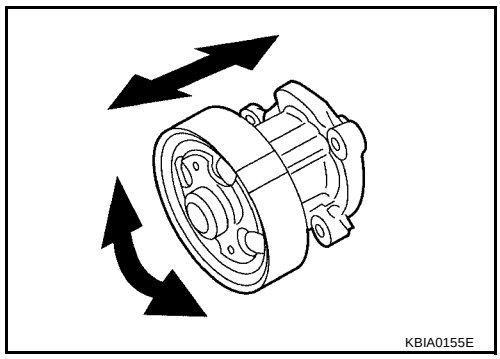
   CAUTION:
   - **Handle the water pump vane so that it does not contact any other parts.**
   - **The water pump cannot be disassembled and should be replaced as a unit.**
4. Remove the water pipe mounting bolts.
5. Remove the water pump housing from the engine block. Use a new gasket for installation.

Water Pipe

1. Remove the water pump.
2. Remove the exhaust manifold. Refer to EX-3, "Removal and Installation" .
3. Remove the water pipe from the thermostat housing.

INSPECTION AFTER REMOVAL

- Visually check that there is no significant dirt or rust on the water pump body and vane.
- Check that there is no play when rotating the vane shaft, and that it turns smoothly when rotated by hand.
- If necessary, replace the water pump as an assembly.



KBIA0155E

INSTALLATION

Installation is in the reverse order of removal.

NOTE:
When inserting the water pipe end into the thermostat housing, apply coolant to the O-ring seal and install immediately.

INSPECTION AFTER INSTALLATION

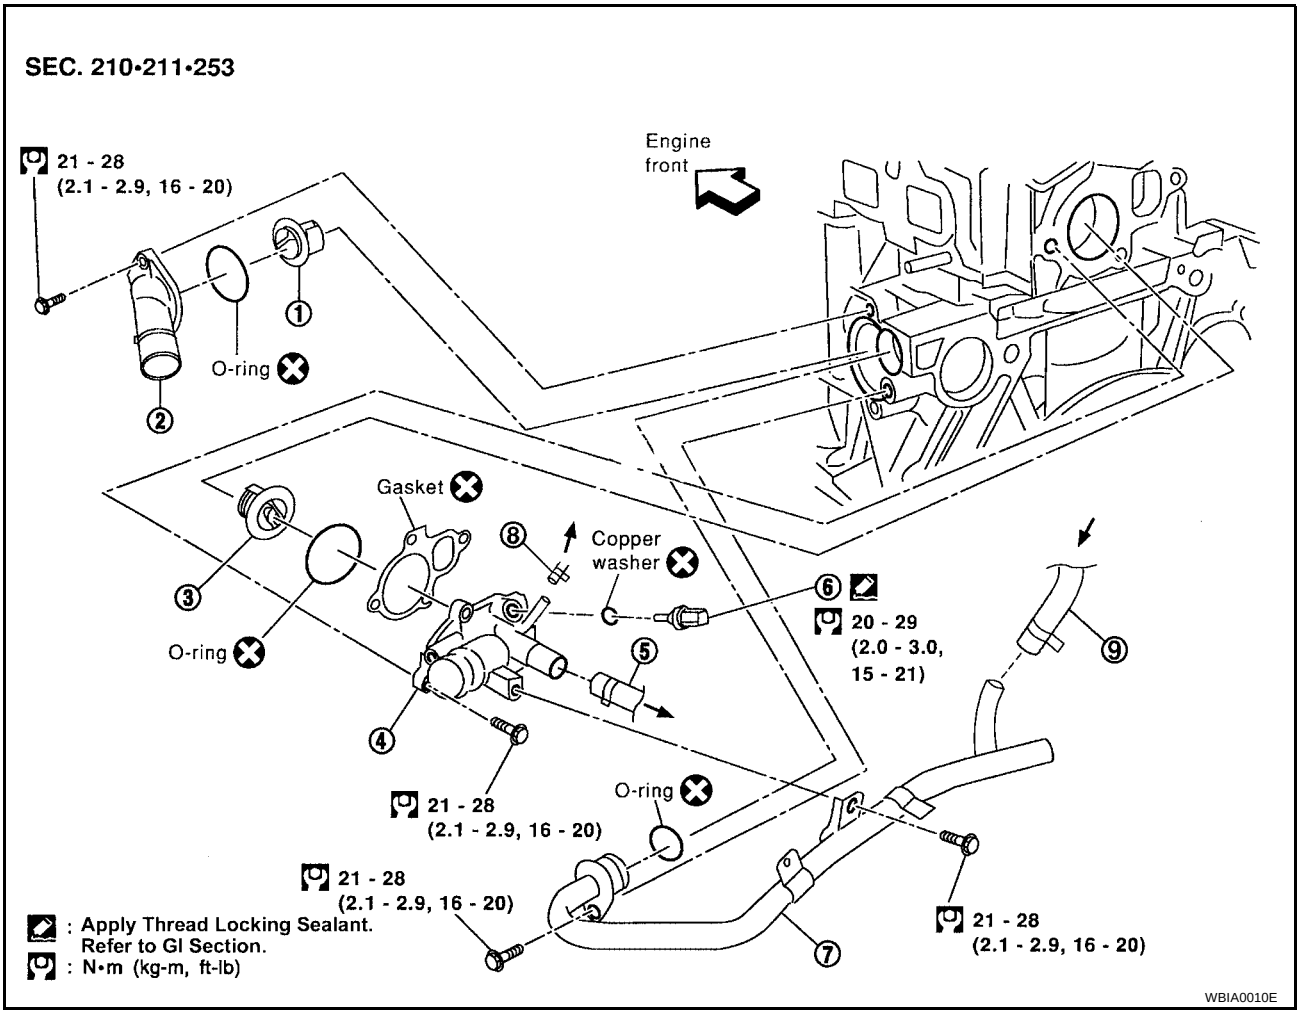
After installing the water pump and pipe, check for leaks using the radiator cap tester. Refer to CO-34, "CHECKING RADIATOR" .

THERMOSTAT AND THERMOSTAT HOUSING

PFP:21200

Removal and Installation

EBS00CHO



1. Thermostat
2. Water inlet housing
3. Water control valve
4. Water outlet housing
5. Heater hose
6. Water temperature sensor
7. Heater pipe
8. Throttle body coolant inlet
9. Throttle body coolant outlet

WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.

CAUTION:

Perform when the engine is cold.

REMOVAL

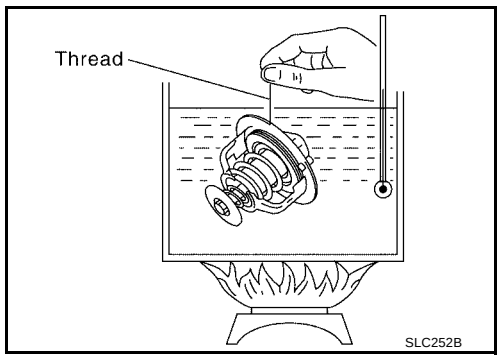
Thermostat

1. Drain engine coolant. Refer to MA-23, "DRAINING ENGINE COOLANT" .
2. Remove the lower radiator hose from the water inlet housing.
3. Remove the water inlet housing.
4. Remove the thermostat.

Water Control Valve

1. Drain engine coolant. Refer to MA-23, "DRAINING ENGINE COOLANT" .
2. Remove the upper radiator hose, heater pipe, and heater hose.
3. Remove the water outlet housing.
4. Remove the water control valve.

INSPECTION AFTER REMOVAL



- Place a string so that it is caught in the valve of the thermostat (or water control valve) and suspend it in boiling water. It must be fully immersed in the water.
- The valve opening temperature is the temperature at which the valve plate begins to rise from the top plate causing the thermostat to fall off of the string.
- Continue heating the water and thermostat to check the full-open valve lift distance.

  NOTE:
  The full-open lift amount standard temperature for the thermostat (water control valve) is the reference value.
- After checking the full-open lift amount, lower the water temperature and check the valve closing temperature.

Standard Values

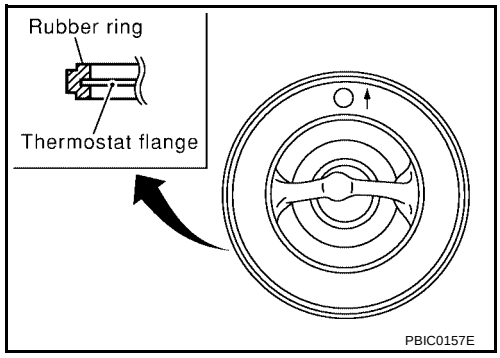
Component	Thermostat	Water control valve
Valve opening temperature	80.5 - 83.5°C (177 - 182° F)	93.5 - 96.5°C (200 - 206°F)
Full-open lift amount	More than 8 mm/ 95°C (0.315 in/ 203 °F)	More than 8 mm/ 108°C (0.315 in/ 226 ° F)
Valve closing temperature	77°C (171°F)	90°C (194° F)

INSTALLATION

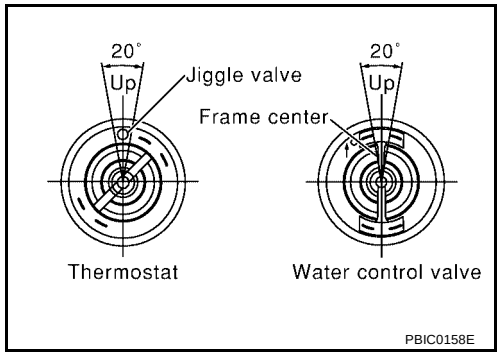
- Installation is in the reverse order of removal.

Thermostat and Water Control Valve

- Install the thermostat and water control valve with the whole circumference of each flange fitting securely inside the rubber ring. (The example in the figure shown is the thermostat.)



- Install the thermostat with the jiggle valve facing upwards. (The position deviation may be within the range of ±10°.)
- Install the water control valve with the up-mark facing up and the frame center part facing upwards. The position deviation may be within the range of ±10° of vertical.



Heater Pipe

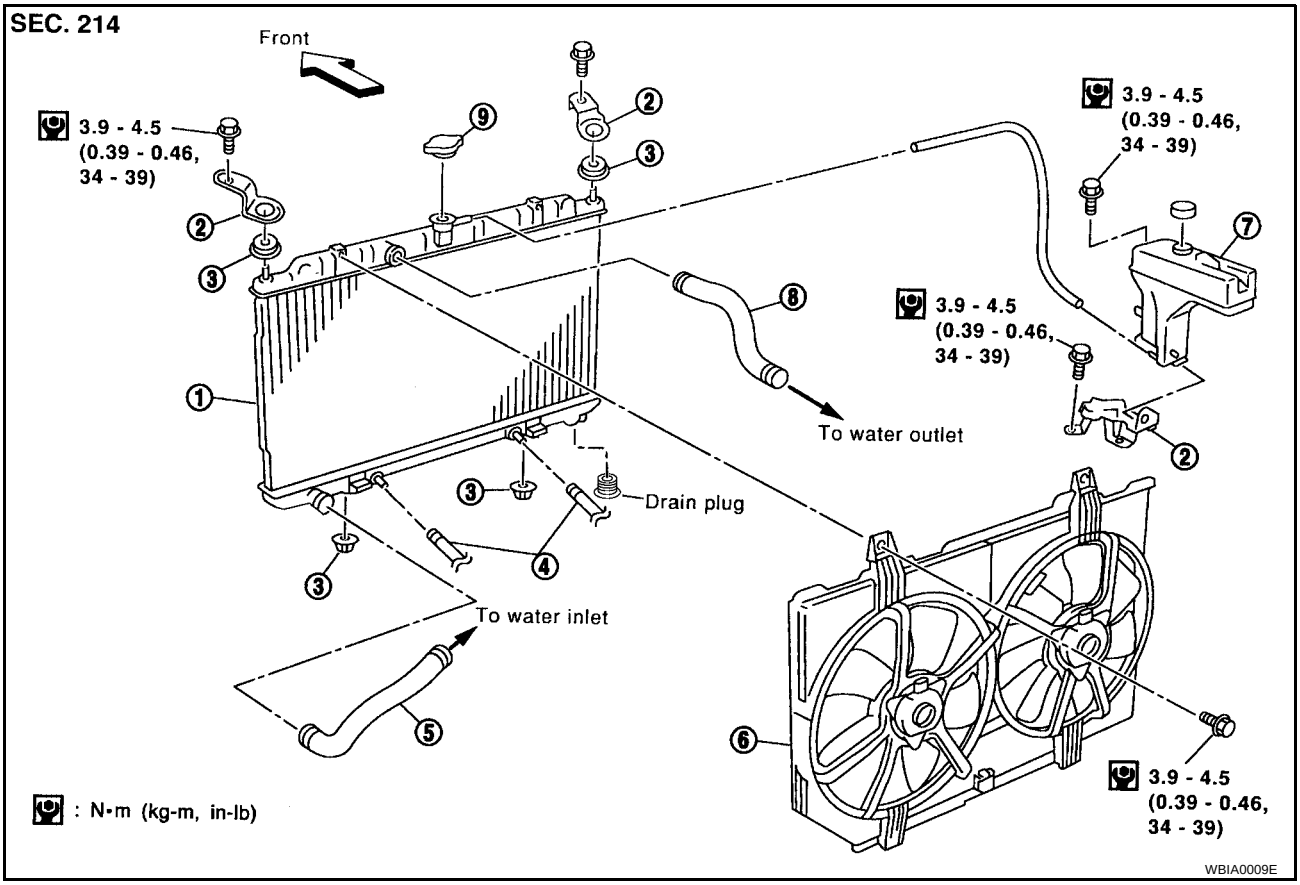
- Apply clean coolant to the heater pipe O-ring, and immediately install the heater pipe into the installation holes.

RADIATOR

PFP:21400

Removal and Installation

EBS00CHP



1. Radiator
2. Bracket
3. Mounting rubber
4. A/T oil cooler hose (if equipped)
5. Radiator hose (lower)
6. Cooling fan assembly
7. Reservoir tank
8. Radiator hose (upper)
9. Radiator cap

WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator. Wrap a thick cloth around the cap. Slowly push down and turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by pushing down and turning it three-quarters around.

REMOVAL

1. Drain the engine coolant. Refer to MA-23, "DRAINING ENGINE COOLANT" .
2. Remove the air duct with air cleaner assembly.
3. Disconnect A/T oil cooler hoses (if equipped).
   - Install a blind plug to avoid leakage of A/T oil.
4. Disconnect the radiator upper hose, lower hose, and mounting bracket.
5. Remove the radiator and cooling fan assembly

CAUTION:

- **Do not damage or scratch radiator core when removing.**

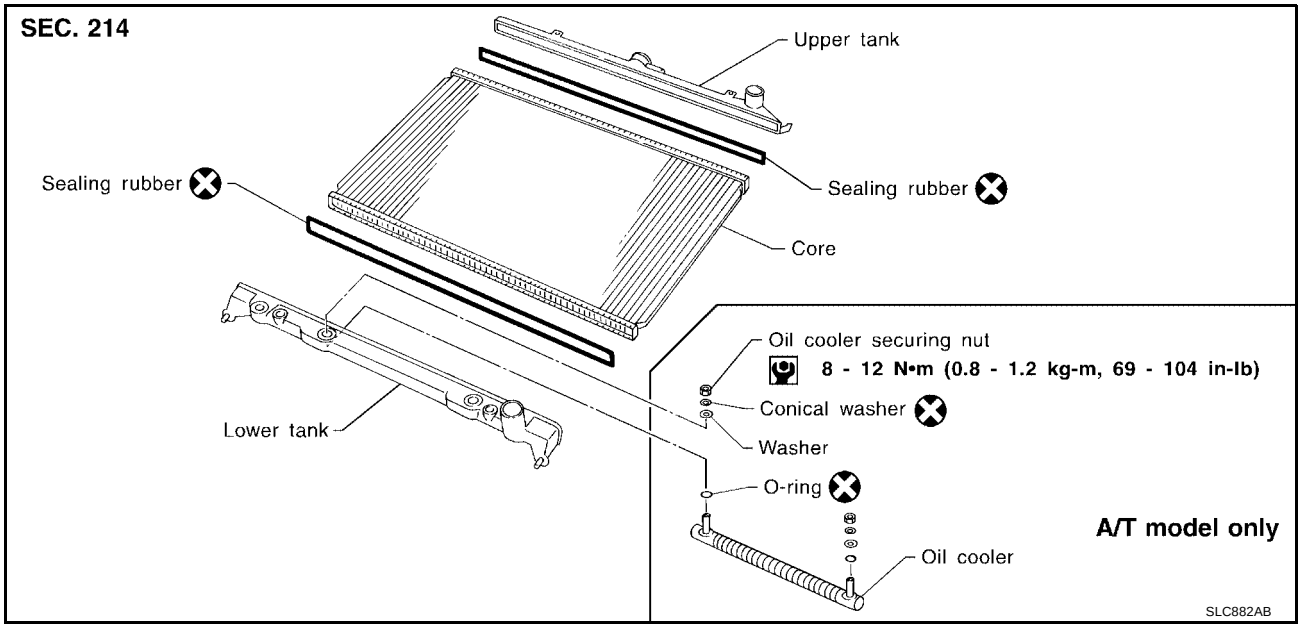
INSTALLATION

Installation is in the reverse order of removal.

- After installation, run the engine until it reaches full operating temperature and check for any cooling system leaks. Repair any leaks as necessary.

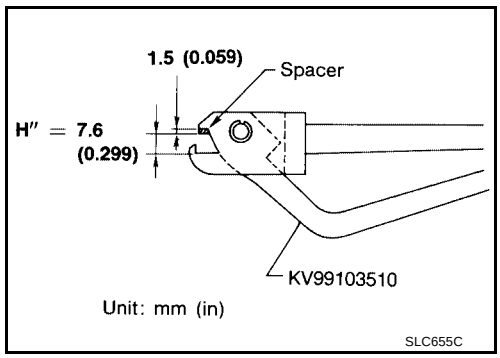
Disassembly and Assembly

EBS00CHQ



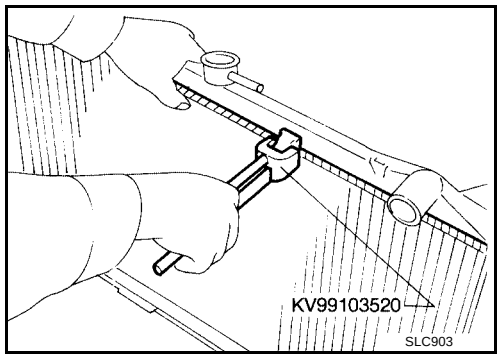
PREPARATION

1. Attach the spacer to the tip of the radiator plate pliers A. Spacer specification: 1.5 mm (0.059 in) thick x 18 mm (0.71 in) wide x 8.5 mm (0.335 in) long.
2. Make sure that when radiator plate pliers A are closed dimension H″ is approx. 7.6 mm (0.299 in).
3. Adjust dimension H″ with the spacer, if necessary.



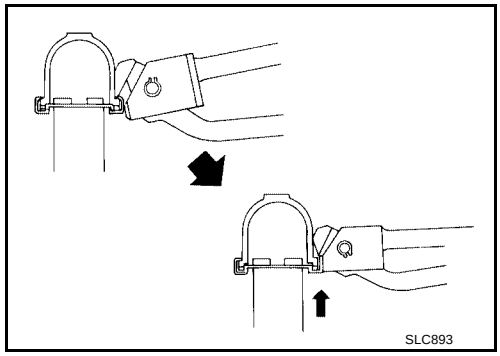
DISASSEMBLY

1. Remove tank with Tool.



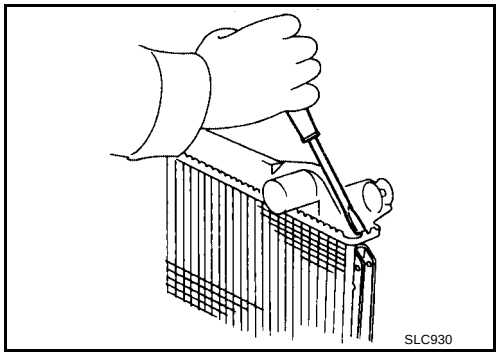
- Grip the crimped edge and bend it upwards so that the Tool slips off.

CAUTION:
Do not bend excessively.

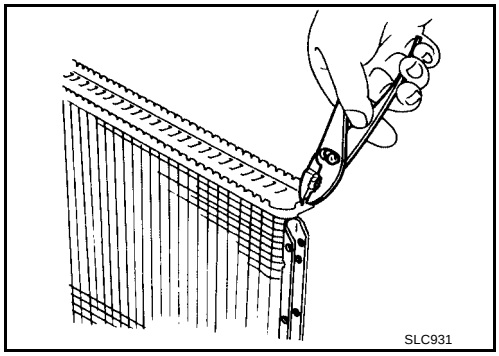


- In areas where Tool cannot be used, use a screwdriver to bend the edge up.

  CAUTION:
  Be careful not to damage tank.

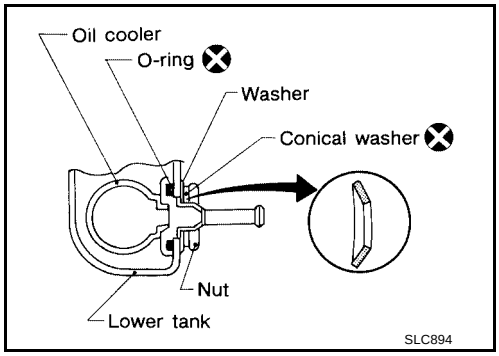


2. Make sure the edge stands straight up.
3. Remove oil cooler from tank (A/T model only).

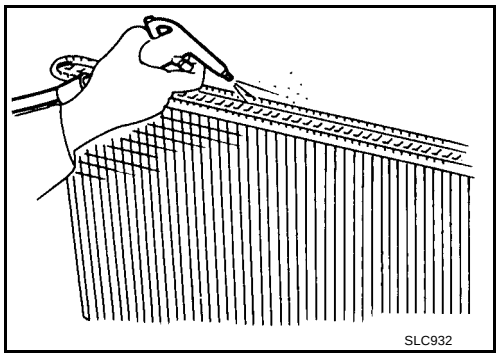


ASSEMBLY

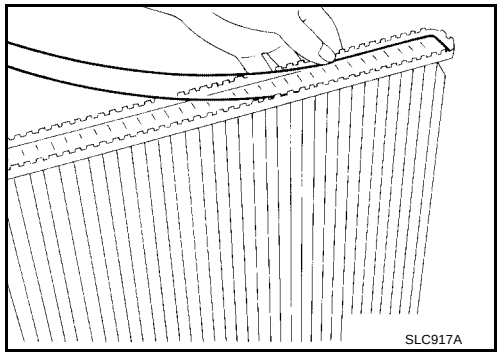
1. Install oil cooler (A/T model only).
   - **Pay attention to direction of conical washer.**



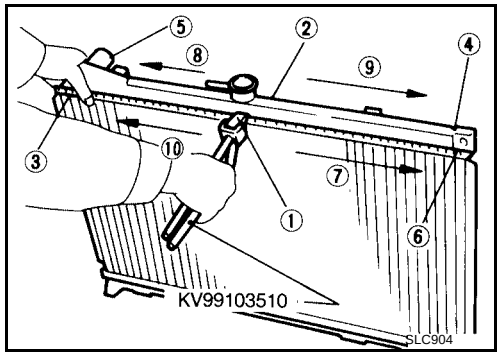
2. Clean contact portion of tank.

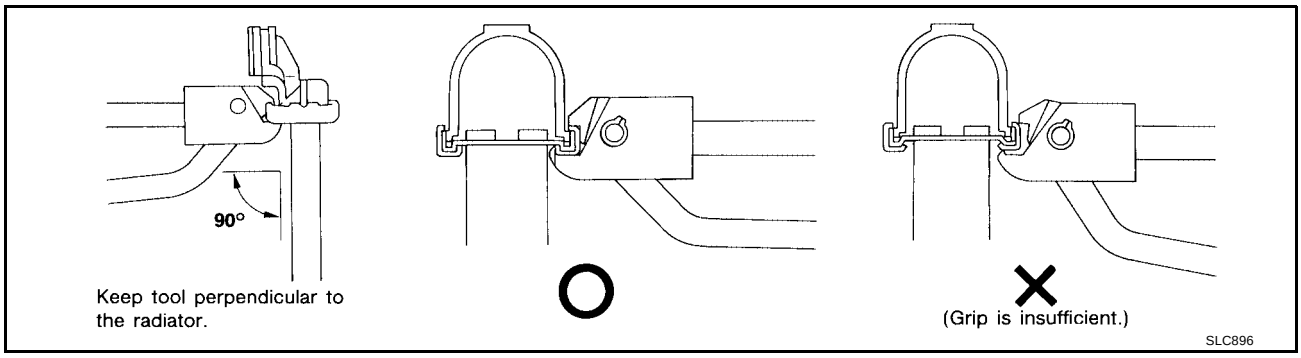


3. Install sealing rubber.
   - **Push it in with fingers.**
   - **Be careful not to twist sealing rubber.**

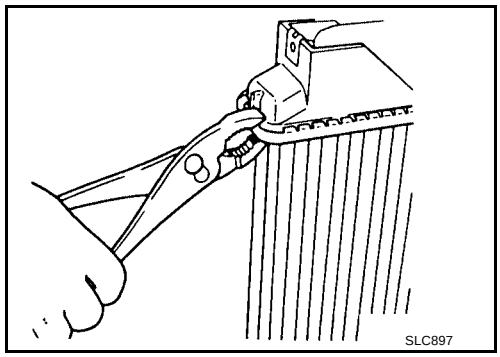


4. Crimp tank in specified sequence with Tool.





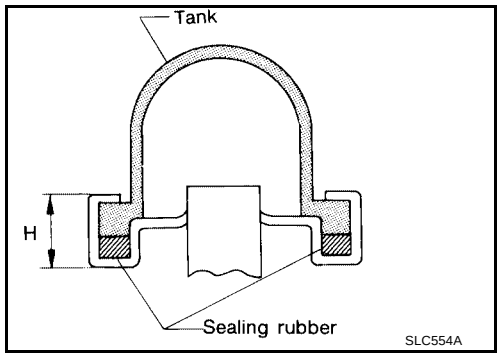
- Use pliers in the locations where Tool cannot be used.



5. Make sure that the rim is completely crimped down.

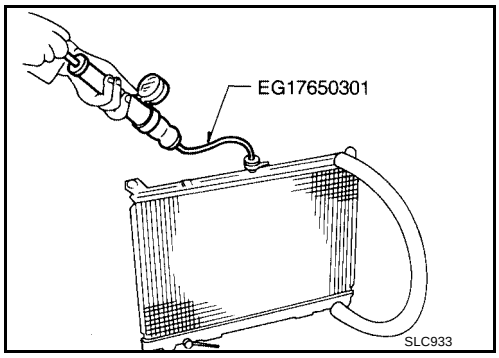
   Standard height “H” : 8.0 - 8.4 mm (0.315 - 0.331 in)

6. Confirm that there is no leakage.
   - **Refer to CO-34, "Inspection" .**



INSPECTION

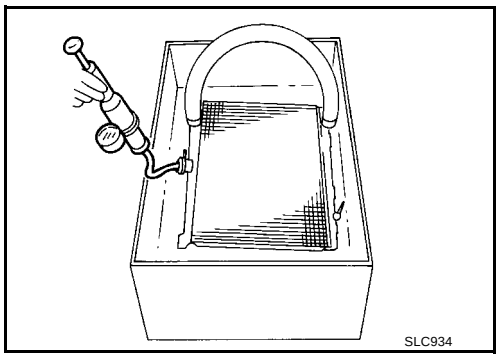
1. Apply pressure with Tool.



Specified pressure value : **157 kPa (1.6 kg/cm^2 , 23 psi)**

WARNING:
To prevent the risk of the hose coming undone while under pressure, securely fasten it down with a hose clamp.
Attach a hose to the oil cooler as well (A/T model only).

2. Check for leaks in dip tank.

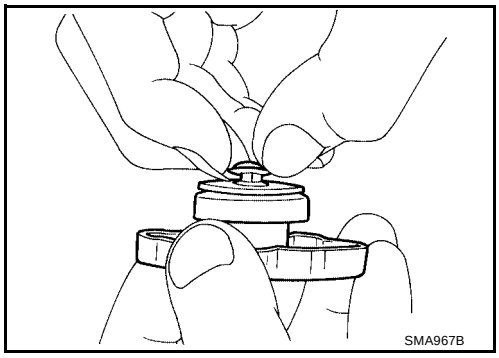


Inspection

EBS00CHR

CHECKING RADIATOR CAP

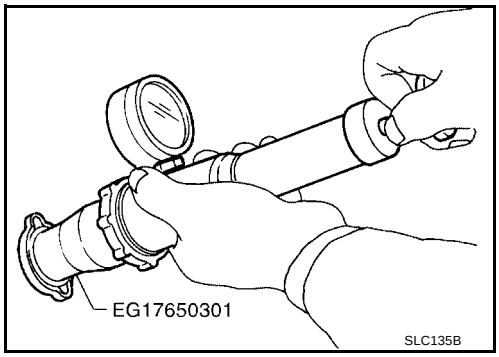
- Check that there is no dirt or damage on the valve seat of the radiator cap negative-pressure valve.
- Check that there are no abnormalities in the opening and closing conditions of the negative-pressure valve.
- Pull the negative pressure valve to open it.
- Check that it closes completely when released.



- Check radiator cap relief pressure.

Standard : **78 - 98 kPa (0.8 - 1.0 kg/cm^2 , 11 - 14 psi)**

Limit : **59 kPa (0.6 kg/cm^2 , 9 psi)**



- When connecting the radiator cap to the tester, apply water to the cap seal surface.
- Replace the radiator cap if there is an abnormality in the negative-pressure valve, or if the open-valve pressure is outside of the standard values.

CHECKING RADIATOR

Check radiator for mud or clogging. If necessary, clean radiator as follows:

- Be careful not to bend or damage the radiator fins.

- When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, radiator shroud and horns. Then tape the harness and connectors to prevent water from entering.

1. Apply water by hose to the back side of the radiator core vertically downward.
2. Apply water again to all radiator core surfaces once per minute.
3. Stop washing when clear water is flowing off the radiator.
4. Blow air into the back side of radiator core vertically downward.

- Use compressed air lower than 490 kPa (5 kg/cm^2 , 71psi) and keep distance more than 30 cm (11.8 in).

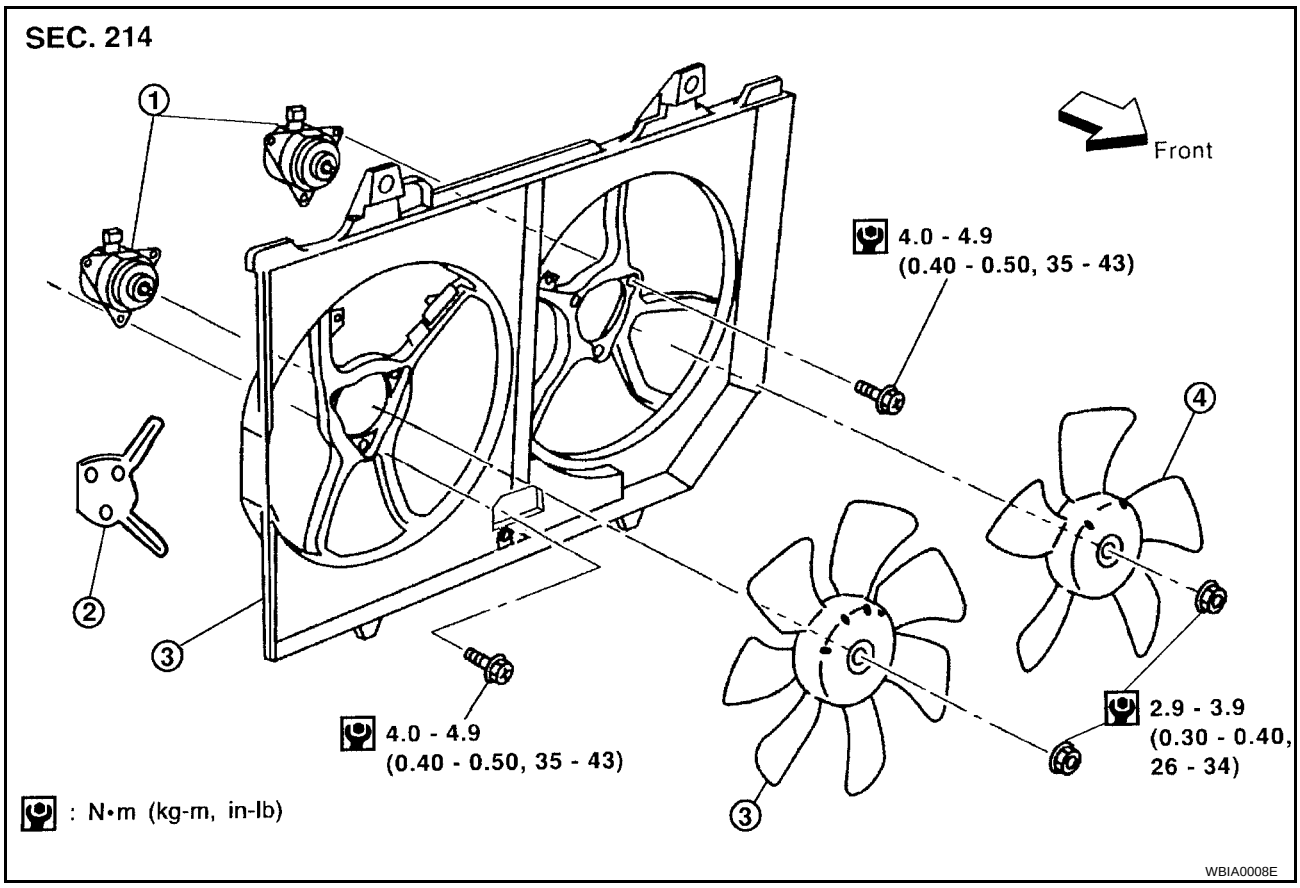
5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.
6. Check for leakage.

COOLING FAN

PFP:21060

Disassembly and Assembly

EBS00CHS



1. Cooling fan motor
2. Insulator
3. Cooling fan shroud
4. Cooling fan blade

DISASSEMBLY

1. Remove the radiator and cooling fan assembly. Refer to CO-30, "REMOVAL" .
2. Remove the cooling fan shroud from the radiator.
3. Remove the cooling fan blades from the cooling fan motors.
4. Remove the insulator.
5. Remove the cooling fan motors from the fan shroud.

ASSEMBLY

- Assembly is in the reverse order of disassembly.

Capacity

EBS00CHT

Coolant capacity with reservoir tank (MAX level)	Approximately 6.3 ℓ (6 qt.)

Thermostat

EBS00CHU

Valve opening temperature	80.5 - 83.5°C (177 - 182°F)
Valve lift	More than 8 mm / 95°C (0.315 in / 203°F)

Water Control Valve

EBS00CHV

Valve opening temperature	93.5 - 96.5°C (200 - 206°F)
Valve lift	More than 8 mm / 108°C (0.315 in / 226°F)

Radiator

EBS00CHW

Unit: kPa (kg/cm^2 , psi)

Cap relief pressure	Standard	78- 98 (0.8 -1.0, 11-14)
	Limit	59 (0.6, 9)
Leakage test pressure		157 (1.6, 23)
